OVERCRIMINALIZING SPEECH
MICHAL BUCHHANDLER-RAFAEL *

ABSTRACT

Recent years have seen a significant expansion in the criminal justice system’s use of various preemptive measures, aimed to prevent harm before it occurs. This development consists of adopting a myriad of prophylactic statutes, including endangerment crimes, which target behaviors that merely pose a risk of future harm but are not in themselves harmful at the time they are committed.

This Article demonstrates that a significant portion of these endangerment crimes criminalizes various forms of speech and expression. Examples include conspiracies, attempts, verbal harassment, instructional speech on how to commit crimes and possession crimes. The Article argues that in contrast with conventional wisdom’s assumption that the right to free speech is broadly protected under existing jurisprudence, much speech is currently overcriminalized under the endangerment justification. Free speech doctrines and criminal law are in tension with one another. While under its First Amendment jurisprudence the Court contracts government’s power to ban speech, criminal law constantly expands the scope of speech crimes.

The Article contends that existing doctrines attempting to explain this inconsistency fail to provide a principled explanation for the absence of First Amendment scrutiny from various types of speech crimes. To ameliorate this problem, the Article proposes a unified analytical framework for assessing when speech justifies criminalization and when it warrants constitutional protection. The proposal suggests that all speech crimes should be subject to constitutional scrutiny under free speech doctrine as well as to additional constraints stemming from criminal law theory. The Article provides several factors to guide this judicial inquiry into determining the scope of criminal bans on speech.

Visiting Assistant Professor of Law, Washington and Lee School of Law. S.J.D. University of Virginia School of Law. My deepest gratitude to Benjamin Spencer, Associate Dean for Research at W&L Law, for providing invaluable comments and feedback on several drafts of this paper and for devoting enormous time and effort to this piece. I am also grateful to the following individuals for their extremely helpful comments on an earlier draft: Dean Nora Demleitner, Mark Drumbl, Erik Luna, Timothy MacDonnell, Ann Massie, Brian Murchison, Doug Rendleman and Joan Shaughnessy, Thank you also to the participants of Washington and Lee’s Faculty Workshop for their helpful feedback on this paper. **OVERCRIMINALIZING SPEECH**

**INTRODUCTION**

Tarek Mehanna a 22-year-old American-Muslim citizen was living in Massachusetts and studying towards a doctorate degree in pharmacy. A devoted scholar of Islam, Mehanna began to translate Arab-language materials into English. He then posted his translations on al-Tibyan, an Islamic website that comprised an online community for those sympathetic to al-Qaida and Jihadi perspectives. Website members shared opinions, videos and texts in online forums. The translated writings, which were already available on the Internet, varied significantly in their potential link to terrorism, ranging from some al-Qaida-generated media and materials supportive of al-Qaida and/or jihad, such as instructing readers to “ask God for martyrdom” and to “Go for Jihad Yourself”, to more innocuous writings loosely tethered to the jihad movement, such as maintaining physical fitness.

In 2009, Mehanna, who had no prior criminal record, was arrested on terrorism-related charges. The government argued, among others, that the translated writings provided a service to al-Qaida, because its purpose was to spur readers on to jihad and inspire al-Qaida supporters to commit terrorist acts. On December 19, 2011 a Massachusetts jury convicted Mehanna of four terrorism-related charges, including

5 Id. (the charges against Mehanna were based on two separate clusters of activities, one centered on his travel to Yemen, in search of an al-Qaida training camp, the other was translation-centric).
conspiring to provide material support to a foreign terrorist organization, in violation of 18 U.S.C. § 2339B.\(^6\) The district court sentenced Mehanna to a 210-month prison term.\(^7\) On November 13, 2013 the United States Court of Appeals for the First Circuit upheld Mehanna’s conviction and sentence.\(^8\)

Mehanna’s translation-centered conviction raises some vexing questions concerning how we distinguish between speech that warrants criminal prohibition and speech that ought to be protected against criminal sanctions by the First Amendment. As the case poignantly illustrates, making this distinction can be difficult. Convicting Mehanna with conspiring to provide material support to a foreign terrorist organization based on translation into Arabic of materials that praise terrorist acts, raises significant concerns about how and the extent to which speech is criminalized. Concerns about the scope of speech-based criminal prohibitions extend above and beyond the terrorism context. Other examples include criminalizing a host of risk creation conducts, ostensibly to prevent future harm. These statutes range from conspiracies and attempts to instructional speech providing information useful for the commission of crimes. Indeed, when one reviews the broad array of instances in which speech is now criminalized, it begins to seem as if speech has become overcriminalized.

The overcriminalization of speech parallels a broader trend in substantive criminal law, which has undergone an unprecedented expansion in recent years.\(^9\) The “overcriminalization phenomenon” as commentators have dubbed it, is the tendency for a constantly growing array of criminal statutes to make individuals liable for conviction and punishment for a wider range of behaviors.\(^10\) Scholars have identified four principal manifestations of this phenomenon: First, \textit{federalization of crimes}, the explosive growth

\(^{6}\) \textit{Id.} at 42.

in the scope and size of federal criminal offenses.\textsuperscript{11} Second, \textit{overlapping crimes}, namely, re-criminalizing conduct that has already been proscribed by another statute.\textsuperscript{12} Third, \textit{endangerment offenses}, where harm is merely threatened but the risk has not yet materialized.\textsuperscript{13} Fourth, \textit{ancillary crimes}, namely, offenses that function as surrogates for the prosecution of primary or core crimes.\textsuperscript{14} Although the literature describing this general phenomenon is extensive, any specific discussion of the overcriminalization of speech is notably absent. This Article fills that void.

As it turns out, one particular category of criminal prohibitions on speech -- endangerment speech crimes -- is the area in which the overcriminalization of speech is most prominent and disconcerting. Endangerment speech crimes consist of prohibitions that target expression that ostensibly increases the likelihood of inflicting future harm. Examples include conspiracy to commit terrorism-related crimes, criminal bans on verbal harassment and an array of statutes covering disorderly conduct, including prohibitions on public drunkenness and expression of profanities in public.\textsuperscript{15} In recent years, Federal and state legislatures have expanded the scope of these crimes by prohibiting a myriad of crime prevention offenses that target risk-creating speech.\textsuperscript{16} The overcriminalization of speech is therefore yet another facet of the overall overcriminalization phenomenon.

To some readers, the claim that current laws overcriminalize speech may seem highly implausible in light of the popular belief concerning the fundamental importance of the right to free speech in American Constitutional law. A skeptical observer might respond that speech not only is not overcriminalized, but it is also broadly protected, some might even contend over-protected. Indeed, at first blush, the U.S. Supreme Court has been strongly protective of speech, beginning with the landmark \textit{Brandenburg v. Ohio} decision, which significantly limited the criminalization of advocacy of the use of force or of law violation only to cases where the speech is “directed to inciting or

\textsuperscript{12} See HUSAK, supra note 9 at 36-40
\textsuperscript{13} \textit{Id.} In this Article, the phrases “endangerment crimes”, “risk creation crimes” and “harm prevention crimes” are used interchangeably.
\textsuperscript{15} See infra Part I. A-C.
\textsuperscript{16} \textit{Id.}
producing *imminent* lawless action and is *likely* to incite or produce such action, and culminating in the recent decision in *U.S. v. Stevens*, which struck down a federal statute that criminalized the commercial creation, sale or possession of illegal depictions of treatment of animals, considered to be cruel.

However, a more nuanced examination of the relationship between First Amendment jurisprudence and substantive criminal law reveals that this preliminary assumption provides only a partial account of the more complex interplay between them. In fact, these two areas of law run along two parallel lines: Although under its free speech jurisprudence the Court significantly *contracts* the government’s power to adopt content-based restrictions on speech, at the same time, substantive criminal law continuously *expands* restrictions on speech via broadly-worded speech crimes.

The explanation for this seemingly inconsistent treatment of these two areas of law lies in the limited boundaries of the First Amendment. While some speech enjoys First Amendment scrutiny, numerous statutes simply fall beyond its reach and are not measured against its rigorous standards. Existing First Amendment doctrine treats many types of speech crimes as categorically falling beyond the ambit of First Amendment coverage. Consequently, a wide array of crimes—including attempts, conspiracies, solicitations and instructional speech—are not subject to free speech scrutiny. Instead, they are viewed as speech acts, an integral part of an illegal course of conduct or “speech brigaded with action” (hereinafter, speech acts).

Speech acts consist of speech that performs some functional task other than the expressive communication of ideas. These include various forms of expressions that are so intertwined with performative actions that they are treated similarly to conduct, rather than pure speech. The implications of the speech act classification are far-reaching because the First Amendment provides unique protection to speech, subjecting

---

20 *Id.* at 1771 (providing examples for civil and criminal restrictions on speech that fall beyond the scope of the First Amendment).
regulations of speech to numerous restrictions that regulations of conduct need not satisfy, most notably, to the stringent strict scrutiny review." Importantly, speech acts are not viewed as implicating the fundamental right to speak and therefore are not subject to strict scrutiny review. Instead, similarly to general criminal prohibitions, speech acts are only subject to the most lenient judicial review, namely, rational basis scrutiny, which is notably deferential to the government. The upshot is that speech acts are categorically excluded from the scope of First Amendment coverage.

Commentators have long grappled with speech acts doctrines, but have yet to provide a single comprehensive theory that explains which speech falls within the boundaries of free speech coverage and which remains beyond its scope. One prominent account suggests that certain kinds of speech, including offers, agreements, orders, permissions and threats constitute “situation-altering utterances,” which are not subject to free speech scrutiny. Another explanation suggests that certain types of expressions, speech acts among them, are categorically excluded from the ambit of the First Amendment. The latter account further contends that legal doctrines alone are unable to explain what speech is covered by the First Amendment and that an array of non-legal factors, such as economic, political and cultural considerations may explain the lack of free speech coverage from various types of speech.

Existing doctrines, however, are fraught with difficulties, and are unable to provide an analytical framework by which to identify the criteria for determining which speech merits constitutional protection. Notably, they fail to explain why various speech crimes consisting of mere speech, unaccompanied by any action, evade free speech scrutiny even when the expression is prohibited because of its communicative message.

The purpose of this Article is to develop an analytical framework for policy makers to determine when it is appropriate to criminalize speech. While current accounts tell only a partial story, and one that is mostly viewed through the First Amendment lens, here I focus on the implications of speech crimes from a criminal law perspective by revisiting the justifications for these crimes. The main question that I ask here is when, and to what extent, may speech alone, unaccompanied by further acts, constitute the actus reus of a criminal offense? Put differently, when does pure speech transform into criminal behavior? This question has been further sharpened in recent years with the huge explosion in cyberspace communication. Its modified version asks, when does virtual crime, consisting merely of speech, become a crime in the real world?

To answer this question I develop several constitutional constraints as well as constraints stemming from criminal law theory to limit the ambit of speech crimes. The proposed framework suggests a two-step analysis. It begins with the premise that the kernel of what makes a crime one that criminalizes speech lies in the fact that its actus reus is speech of some sort. An initial step in assessing when criminalization is warranted would be asking whether the actus reus of the crime consists of a content-based restriction on speech. If the statute targets speech because of the harm that flows from its content then the criminal prohibition needs to be scrutinized under First Amendment doctrines. The second step consists of examining familiar free speech considerations that are typically applied when a content-based restriction on speech is concerned, such as the value of the speech and the type of harm it threatens.\(^{31}\) Importantly, appropriate risk-management must account for the likelihood that grave harm would be inflicted before speech is criminalized. I therefore propose that a probability test is incorporated into the definition of endangerment speech crimes to ensure that speech is criminalized only when a cost-benefit analysis demonstrates substantial likelihood of dire harm resulting from the speech. From a criminal law perspective, incorporating a probability requirement assures that speech is criminalized only if the perpetrator’s dangerousness is established.

This Article proceeds as follows: Part I explains how speech is currently overcriminalized and elaborates on the problems that have arisen under existing statutes. It demonstrates that as a part of the criminal justice system’s increasing reliance on

---

\(^{31}\) See infra part III. A.1.
preemptive law enforcement, legislatures adopt a myriad of endangerment speech crimes without requiring substantial probability that the speech would result in grave harm. This part further frames the overcriminalization of speech argument within the broader context of the overcriminalization phenomenon in general and the increasing use of preventive measures in criminal law in particular.

Part II considers existing doctrines that attempt to explain when speech should be immune from First Amendment scrutiny. It critiques these explanations by contending that they are unable to properly draw the legal boundary between speech that warrants constitutional protection and one that justifies criminal sanction. This part concludes that since current doctrines are unable to offer a comprehensive account of the absence of First Amendment scrutiny from many endangerment speech crimes, an alternative doctrinal framework should be adopted to evaluate the constitutionality of speech crimes.

Part III offers several constraints -- constitutional ones as well as those grounded in substantive criminal law -- to limit the scope of endangerment speech crimes. It proposes that all speech crimes would be subject to both strict scrutiny judicial review and to internal constraints stemming from criminal law theory. It further develops a number of guidelines that may construct such judicial review and alleviate some of the concerns that arise from the overcriminalization of speech.

I. HOW SPEECH IS OVERCRIMINALIZED

In recent years, the paradigm model for law enforcement has shifted from reactive enforcement to one of proactive prevention. This was done by significantly expanding law enforcement’s prophylactic measures and preventive statutes. The statutes include inchoate-anticipatory crimes, i.e., offenses that proscribe conduct that does not cause harm at the time it is committed, but creates a risk that increases the likelihood that harm will ensue in the future. The imposition of criminal sanction is justified as a preventive

---

measure, designed to preemptively reduce the odds of future harm. Examples of risk creation crimes fall under three main categories: inchoate offenses including conspiracies, solicitations and attempts, endangerment or anticipatory offenses, such as reckless endangerment and prohibitions against driving under the influence of alcohol and drugs and crimes of possession, mainly possession of illicit drugs and weapons.

One overlooked feature of risk creation crimes is that they often prohibit various types of speech and expression. Speech tends to be criminalized under the rubric of endangerment crimes as part of legislatures’ efforts to prevent potentially dangerous future criminal conduct. These crimes target the risks that certain speech might persuade people to engage in unlawful activities or inform them how to engage in such activities. While the speech is not in itself harmful when it is expressed, communicating certain messages has the potential to result in harmful effects. Many jurisdictions have adopted a myriad of endangerment crimes whose actus reus consist of nothing but speech. Examples range from expanding the scope of conspiracy doctrines to cover agreements of ambiguous nature, to extending the reach of attempt doctrines to criminalize speech that falls short of a substantial step to commit a crime, culminating in criminalizing a host of speech-based harassment and verbal bullying.

The overcriminalization of speech stems not only from broadly worded speech crimes, but also from prosecutorial overreaching. The risks of abuse of prosecutorial discretion are not limited to the specific context of endangerment speech crimes as unchecked prosecutorial discretion is sometimes used to reach conducts that do not warrant criminal sanction. But expansive statutes criminalizing various forms of endangerment speech further exacerbate the risks of prosecutorial overreaching due to the vagueness, overbreadth and targeting of inchoate conduct that characterize these laws. The continual increase in preventive crimes in turn facilitates prosecutorial overreaching, therefore further contributing to the overcriminalization of speech.

35 See HUSAK, supra note 9, at 161-62 (discussing the criminalization of risk creation behaviors).
36 Id. at 159-177 (providing examples of risk creation offenses).
37 See infra subsections A-C and accompanying notes.
39 See Sun Beale, supra note 11 at 753-56 (discussing broader aspects of prosecutorial overreaching).
40 See infra subsection C (discussing prosecutorial overreaching in sexting prosecutions).
The overcriminalization of speech has been greatly exacerbated over the last two decades due to the unprecedented rise in the use of the Internet as the dominant form of communication. This change has not only generated new technologies that effectively disseminate various forms of speech but has also created new risks flowing from the content of such speech.\footnote{See Susan W. Brenner and Megan Rehber, “Kiddie Crime”? The Utility of Criminal Law in Controlling Cyberbullying, 8 First Amend. L. Rev. 1,15-16 (2009) (discussing new risks resulting from technological advancements).} The Internet provides a convenient forum for individuals who share potentially dangerous interests, such as pedophilia, to discuss these ideas and play out their thoughts, sometimes converting them into action.\footnote{See infra subsection A.2.} Moreover, although cyberspace communication often includes more traditional one-on-one interactions in which the speaker communicates directly with the target by sending her private messages through e-mails or social networking sites, the Internet’s primary impact is its ability to effectively reach an unlimited and unidentified audience. While under First Amendment doctrines, the paradigm “public forum” included only streets and parks, the Internet has become the modern equivalent of the “public forum”.\footnote{See Peter Linzer, From the Gutenberg Bible to Net Neutrality—How Technology Makes Law and Why English Majors Need to Understand It, 39 McGeorge L. Rev. 1, 3 (2008).} The Internet’s unique features thus raise novel challenges for the criminal law, as the following sections elaborate.\footnote{See infra subsections A-C.}

The prime example of an endangerment speech crime is advocacy of law violation, namely, speech that may lead listeners to commit crimes. The constitutionality of such statute was the issue at stake in the landmark U.S. Supreme Court decision in \textit{Brandenburg v. Ohio}.\footnote{See Brandenburg, 395 U.S. at 447.} In \textit{Brandenburg}, the defendant, a Ku Klux Klan leader, invited a journalist and a cameraman to a Klan rally, where hooded armed figures marched, burning a cross, and uttering racist epithets.\footnote{Id. at 445.} Brandenburg was charged and convicted under Ohio’s Criminal Syndicalism Act prohibiting advocacy of crime. The Court, however, struck down the statute on over-breadth grounds, finding it to be unconstitutional because it punished mere advocacy of unlawful actions, even in circumstances where the speaker did not threaten or incite others to commit imminent crimes.\footnote{Id. at 446-47.} The Court held that the prosecution failed to prove that Brandenburg’s speech
was *likely to cause an imminent public disturbance* or that Brandenburg had attempted to instigate *immediate* violence.\textsuperscript{48} For the Ohio legislature, the increased risk that the speech would result in any harm -- regardless of its likelihood -- was sufficient in its mind to justify criminal prohibition. But the low likelihood that the risk creating speech would lead to law violation was insufficient for the *Brandenburg* Court, which explicitly rejected criminalization of mere endangerment speech.

Following *Brandenburg*, a state may interfere with individuals’ right to advocate unlawful action only when two requirements are met: high likelihood of law violation and imminence of harm. While the *Brandenburg* Court has left the “imminence” requirement ambiguous, the Court’s decision in *Hess v. Indiana* clarified that advocacy of violence “at some indefinite future time” is not sufficient to take speech outside First Amendment shelter; only a “rational inference” of “imminent disorder” will suffice.\textsuperscript{49} In light of *Hess*, imminent means nothing but *immediate* action, which is an almost impossible burden to satisfy.\textsuperscript{50}

However, an entirely different picture emerges, one which is far less speech protective, when considering a host of other speech crimes. The Brandenburg test has been strictly limited to advocacy of crime and has not been further extended to related types of endangerment speech.\textsuperscript{51} As the following sections will demonstrate, numerous criminal statutes broadly prohibit different types of risk-creating speech, without requiring any probability that the speech at issue would result in any harm, let alone grave harm, as a prerequisite for criminalization. These statutes are not only in tension with *Brandenburg*’s holding, but they also raise doubts concerning the justifications for criminalization because speech is criminalized despite the lack of evidence concerning the perpetrator’s dangerousness. Prohibiting the mere potential for future harm enables the criminalization of a multitude of risky conducts that arguably do not warrant criminal sanctions, thus accounting for the overcriminalization of speech.

\textsuperscript{48} Id.
\textsuperscript{49} 414 U.S. 105, 108-09 (1973)
\textsuperscript{50} See GREENAWALT, supra note 22 at 209 (1989)(stating that Hess’ interpretation of imminence “is very restrictive”).
While most legal theorists agree that various types of risk creating behaviors justify criminalization, there is a significant controversy concerning the extent of criminal liability. Commentators note that endangerment crimes are too expansive in scope and need to be redrafted, or at least subject to more intense judicial scrutiny. Several scholars have begun to consider limits on endangerment crimes. The main questions are how early may the criminal law intervene and when is a given behavior sufficiently dangerous to justify preventive criminal intervention. Many commentators agree that endangerment crimes should be significantly limited only to offenses that create serious risk of harm, requiring substantial probability that harm would occur. A probability assessment considers the causal link between risk creation conduct and actual materialization of harm, supporting criminalization only if there is conclusive empirical evidence to establish such nexus. As the following sections demonstrate, many criminal statutes fall short of satisfying this requirement.

The recent proliferation of endangerment speech crimes calls for the adoption of several constraints that might limit their scope. Existing proposals for limits on endangerment crimes in general provide the analytical foundation for developing a theory specifically designed to constrain the scope of speech-based endangerment statutes. I will revisit these limits in Part III and provide my own proposal for how to assess the propriety of criminalizing endangerment speech.

Before delving into specific examples of endangerment speech crimes, it is worth pausing briefly to frame the overcriminalization of speech argument within a broader context. Overcriminalization of speech is principally one facet of a general problem concerning the excessive use of criminal statutes, commonly referred to as “overcriminalization.” Coining this term, Sanford Kadish noted that criminal statutes

52 See HUSAK, supra note 9 at 161.
53 See Slobogin, supra note 33 at 62 (noting the breadth of preventive laws).
54 See, Duff, supra note 34 at 43-62 (proposing limits on the scope of endangerment crimes).
55 See HUSAK supra note 9 at 159-177 (discussing limits to curb overcriminalization).
57 See infra subsections A-C.
58 See infra part III.
59 See Luna, supra note 10 at 703; See also HUSAK, supra note 9 at 3-5.
often encompass conduct not the target of legislative concern.\textsuperscript{60} Kadish broadly defined overcriminalization as the use of the criminal law to pursue public policy objectives for which it is poorly suited.\textsuperscript{61} In recent years, criminal law scholars have vehemently criticized the continual expansion of substantive criminal law, warning against the costs and burdens incurred by the criminal justice system, as well as against the dangers this expansion poses to individual defendants.\textsuperscript{62} They argue that there are too many broadly worded criminal statutes, covering a wide range of behaviors that do not justify the use of the resources of criminal enforcement.\textsuperscript{63} Erik Luna for example summarizes “the overcriminalization phenomenon,” which consists of untenable offenses, superfluous statutes, doctrines that overextend culpability crimes without jurisdictional authority, grossly disproportionate punishments and excessive or pretextual enforcement of petty violations.\textsuperscript{64}

With this background in mind, I turn to this Article’s main contribution concerning the specific problem of the overcriminalization of speech. The subsections below identify concrete manifestations of this phenomenon by considering prominent examples of endangerment speech crimes. These statutes fall under three categories, tracking the classification of general endangerment (non-speech) crimes, and include inchoate crimes, independent endangerment crimes and possession crimes.

A. Inchoate Crimes

Inchoate offenses such as conspiracies and attempts provide a prime example of how much speech is currently overcriminalized.

1. Conspiracy

Recent years have seen a significant increase in preventive criminal statutes prohibiting speech associated with terrorism. Criminalization of terrorism-related behaviors is facilitated through two factors: first, the expansion of the scope of traditional

\textsuperscript{60} See Sanford H. Kadish, \textit{Legal Norm and Discretion in the Police and Sentencing Processes}, 75 Harv. L. Rev. 904, 909 (1962).
\textsuperscript{62} See Luna, supra note 10 at 703-04, 722-23 (describing overcriminalization and its costs).
\textsuperscript{63} See Stuntz, supra note 10 at 507 (noting the broad range of crimes, including trivial ones).
\textsuperscript{64} See Luna, supra note 10 at 717 (summarizing the main features of overcriminalization).
conspiracy doctrines and second, the broad coverage of the prohibition against providing material support to foreign terrorist organizations (hereinafter: FTO.)

The continual threats of terrorism have led the Federal government and the states to create numerous endangerment crimes targeted towards reducing the risks that may emanate from behaviors believed to be related to the activities of terrorist organizations. Following 9/11, the government placed a premium on early detection and prevention by vigorously prosecuting suspects whose conduct was perceived as posing threats to national security. §2339B makes it a crime to knowingly provide material support to any designated FTO, with the phrase “material support” broadly defined to include “training”, “expert advice or assistance”, “service” and “personnel”. Bringing criminal charges under this statute has become the main tool used by the government in exercising preemptive measures against those suspected of connections to terrorism.

Various types of provision of services and expert advice or assistance are often grounded in speech and expression, thus arguably meeting the “support” requirement enumerated in §2339B. For instance, a publication that praises terrorism would be perceived as one form of support for a terrorist organization. As the discussion below illustrates, the broadly worded statute provides the government with expansive powers to prosecute individuals for expressing a host of political viewpoints, when it suspects that the expressive messages conveyed by the speech increase the chances that these messages would persuade others to engage in terrorism.

In Holder v. Humanitarian Law Project (hereinafter: HLP) the U.S. Supreme Court held that the criminal prohibition on advocacy performed in coordination with, or at the direction of, a foreign terrorist organization was not unconstitutional as applied to the particular activities stated by the plaintiffs. More specifically, the Court held that the plaintiffs were prohibited from providing legal support to PKK, a designated FTO on how to follow and implement humanitarian and international law, even when this support

---

66 Id. at 430-31 (describing the government’s policy concerning early prevention).
67 18 U.S.C. §2339B.
69 130 S. Ct. 2705, 2722 (2010).
consists of peaceful resolutions of disputes and the petitioning of various international bodies. The Court rejected the plaintiffs’ vagueness claim, finding that the plaintiffs’ specific conduct squarely fell within the scope of the terms “training” and “expert advice or assistances” required by the statute. As for the claim that the statute violates the First Amendment, the Court acknowledged that the statute limits the scope of free speech but nonetheless held that it was a permissible preventive measure, which criminalizes aid that makes terrorist attacks more likely to occur.

Cognizant of the fact that the above statute adopts a content-based prohibition on speech, the HLP decision purports to draw on two important distinctions demarcating the legal boundary between protected and prohibited speech. The first distinguishes between mere membership and actual support of the organization by implying that joining a terrorist organization is a constitutionally protected activity while engaging in speech that aids that organization may be criminalized. The second distinction rests on the purported difference between independent advocacy of terrorism, which is constitutionally protected under the First Amendment and concerted activity amounting to provision of service to the FTO, in coordination with or at the direction of this organization, which is criminalized. Prohibiting the latter is justified, reasoned the Court, because the probability of a terrorist attack increases due to receiving support. It is crucial to note, however, that the HLP holding does not require a substantial probability that the speech would result in tangible harm. Any slight increase in the probability of harm, regardless of its actual likelihood, suffices to uphold criminalization.

The prohibition against providing material support criminalizes not only the provision of support to FTOs but also conspiring to do so. A significant component in the government’s use of preventive statutes includes bringing criminal charges for conspiring to provide material support to FTOs. The above statutory language provides an important measure for the government to broaden the scope of conspiracy law in order

to curb what it perceives as potential risks of future terrorism. Notably, these conspiracy charges are based solely on the defendants’ engagement in various forms of speech.

Examples of the government’s use of conspiracy doctrine to criminalize different types of endangerment speech fall under two categories, the first involving prosecutions against Muslim religious leaders whose teachings are perceived as advocating of terrorism, and the second involving prosecutions of individuals who operate, post messages or otherwise contribute to various Islamic web sites suspected of connections with terrorist organizations.77

The prosecution of Omar Abdel Rahman provides a salient example of the first category of cases.78 Rahman, a Muslim religious figure (Sheik), was charged with seditious conspiracy and solicitation, based on the government’s theory that he was the leader of a terrorist network, which plotted to bomb the World Trade Center in 1993.79 The government presented evidence that Rahman dispensed religious opinions (fatwas) on the holiness of terrorist acts, instructing his supporters to “do jihad with the sword, with the cannon, with the grenades, with the missile . . . against God's enemies”.80 This speech, argued the government, amounted to conspiracy to commit crimes of terrorism. A jury convicted him on all counts, and he was sentenced to life in prison.81 On appeal, the Second Circuit rejected Rahman’s argument that his conviction violated the First Amendment.82 The court held that criminal conspiracies were not protected simply because they were formed through words.83 While the Second Circuit treated the case as one involving conspiracy, much of the evidence it relied upon to prove this conspiracy consisted of the defendant’s advocacy of terrorism.84 The Rahman case thus illustrates the blurred line between advocacy of crime, which is generally protected under the Brandenburg test, in the absence of high likelihood and imminence of harm, and conspiracy to commit terrorist acts, which is criminalized.

84 See Healy, supra note 51 at 670.
The case mentioned in the introduction, *U.S. v. Tarek Mehanna*, is illustrative of the second category of cases concerning criminal charges against individuals who advocate terrorism on Islamic websites.\(^85\) Mehanna’s conviction of conspiring to provide material support to al-Qaida rested on two separate clusters of activities, one relating to a trip he made to Yemen, allegedly to join an al-Qaida training camp, which he failed to find, the other was speech-based, namely, his translation of al-Qaeda’s propaganda materials from Arabic into English and posting them on a jihadist website.\(^86\) Since this Article’s main thesis concerns the overcriminalization of speech, the analysis below focuses solely on the latter grounds for conviction.

The government alleged that Mehanna's translations constituted “material support” in the form of a “service” to a terrorist organization because they aided al-Qaeda by spreading its messages and by facilitating recruitment of followers who would pursue terrorist endeavors.\(^87\) The government further alleged that Mehanna agreed with others to provide material support to al-Qaida and that he committed several overt acts in furtherance of this conspiracy, including watching jihadi videos, discussing efforts to create like-minded youth in the Boston area and discussing attending a terrorist camp.\(^88\) Mehanna denied having any direct connection with al-Qaida, insisting that the government was required to establish such connection.\(^89\) The jury accepted the government’s theory and convicted Mehanna, among others, based on the translated materials.\(^90\) Mehanna appealed his conviction, arguing that the district court committed legal errors in charging the jury with respect to the translations.\(^91\)

Writing for the court, Judge Selya rejected Mehanna’s argument that the translations merely amounted to independent advocacy, which the *HLP* Court held was constitutionally protected speech.\(^92\) The court reiterated HLP’s holding that advocacy performed in coordination with or at the direction of an FTO is not shielded by the First

Amendment.93 Dismissing Mehanna’s claim that the jury instructions failed to define the term “coordination”, the court held that the district court defined the term functionally by explaining to the jury that independent advocacy for either an FTO or an FTO's goals does not amount to coordination. The court further stressed that the government's "translations-as-material-support" theory was premised on the concept that the translations comprised a "service," which is a form of material support within the purview of the statute.94 Therefore, the court held that the jury instructions embraced the legal construct adopted by the Court’s holding in HLP that "service," as material support, "refers to concerted activity, not independent advocacy, and thus not shielded by the First Amendment."95 The court further clarified that neither the statute itself nor the Court’s decision in HLP require that the person providing the alleged support to an FTO have a direct connection to the FTO.96 Addressing Mehanna’s claim that the jury’s finding of “coordination” with an FTO lacked sufficient supporting evidence, the court further held that even if that proof was factually insufficient, the conviction was independently supported based on the government’s Yemen trip theory, for which the government presented mass evidence.97

Cognizant of the difficulties that the government’s “translation as service” theory poses for First Amendment jurisprudence, the court attempts to play down the significance of the translation-centric charge by characterizing it only as an alternative basis for conviction.98 But while Mehanna’s trip to Yemen figures more prominently in the decision, the court nowhere rejects the government’s unprecedented theory that mere translation of materials already publicly available on the Internet amounts to provision of service to al-Qaida. The court accepts the government’s expansive position even though it neither provided evidence that Mehanna ever met or communicated with anyone from al-Qaeda, nor demonstrated that the translation was sent to this organization.99

The *Mehanna* decision is deeply troubling for several reasons. First, it demonstrates how the prohibition against providing material support to FTOs criminalizes much speech despite the arguably weak causal link between the speech in question and the risk of future harm. As the Court has long noted, the Constitution is not a suicide pact, and defendants’ right to free speech should be outweighed by clear risks emanating from dangerous speech, provided that such risks are indeed established.\footnote{Cf. Terminiello v. Chicago 337 U.S. 1, 37 (1949) (J. Robert H. Jackson, dissenting, suggesting that individual constitutional rights may be encroached when significant risk are identified).} However, the evidence in the *Mehanna* case fell short of demonstrating high likelihood of substantial harm to national security. Instead, criminalization of speech was upheld there based on mere risk that the translations would support al-Qaida by inciting others to commit terrorist acts. Furthermore, existing literature offers little evidence of a correlation between religiously based speech or particular religious ideologies and terrorism.\footnote{See Aziz Z. Huq, *The Signaling Function of Religious Speech in Domestic Counterterrorism*, 89 Tex. L. Rev. 833 at 891-93, 900 (2011).} Convicting individuals for disseminating speech that merely praises an ideology, including a violent and repugnant one, rather than explicitly calling for commission of terrorist acts, is especially disconcerting because such speech reflects mere aspirations rather than concrete operational plans. The assumed dangers stemming from glorifying terrorist acts have yet to be verified empirically.

Second, the decision undermines existing First Amendment jurisprudence by expanding government’s authority to suppress political expression and association in the name of perceived threats to national security, creating a “chilling” effect on political dissent.\footnote{Cf. David Cole, *The First Amendment’s Borders: The Place of Holder v. Humanitarian Law Project in First Amendment Doctrine*, 6 Harv. L. & Pol’y Rev 147, 147-50 (2011) (noting that the HLP decision creates a chilling effect on legitimate political speech).} *Mehanna*’s ideological support for al-Qaida undoubtedly expresses extremist viewpoints that are rightly perceived by the vast majority of Americans as abhorrent. Judge Richard Posner, for example, contends that speech that supports terrorism does not warrant constitutional protection because such messages do not comport with Western democratic values.\footnote{See RICHARD POSNER, NOT A SUICIDE PACT: THE CONSTITUTION IN A TIME OF NATIONAL EMERGENCY 120-26 (2006).} In contrast, I argue here that it is precisely that type of abominable messages that are the paradigm example of political speech warranting constitutional
protection as long as they fall short of establishing high likelihood of harm. The strength of the First Amendment and a democratic regime’s tolerance towards dissenting opinions are best measured when considering these appalling cases.

Third, and most importantly, a fundamental concern raised by the Mehanna decision is the surprising interplay between general criminal law and First Amendment law. As noted earlier, speech that incites others to violence is generally protected under Brandenburg’s stringent test. Prior to 9/11, Mehanna could not have been convicted for advocacy of terrorism even if he had written the inciting materials himself, unless the government could demonstrate the high likelihood and immanency requirements, a standard virtually impossible to meet for written texts.104 Arguably, prosecutions of individuals based on their advocacy of terrorism directly clashes with Brandenburg.105 Under Brandenburg, the First Amendment should have protected Mehanna’s expression of abstract views supporting violence by someone acting independently of an FTO, even when those views coincide with those of the terrorist organization.

Nevertheless, by taking the indirect path of criminalizing conspiracy to provide material support to FTO, the criminal law enables the government to accomplish precisely the same result that the First Amendment squarely prohibits.106 Although under federal law there is no statute directly criminalizing incitement to terrorism, substantive criminal law, via its generous conspiracy doctrines, provides the government with ample measures to limit the spread of allegedly terrorist messages. Importantly, unlike First Amendment jurisprudence, requiring high likelihood of harm, conspiracy law criminalizes speech without requiring any nexus between the expressive messages and actual harm. Conspiracy law thus functions as an effective means for the government to bypass First Amendment jurisprudence’s strict requirements for prohibiting advocacy of violence, resulting in a direct collision between these two areas of law.107 Advocacy of crime (ostensibly including terrorism), which is constitutionally protected under free speech doctrines, becomes prohibited under conspiracy doctrine, with no constitutional

104 See Cole, supra note 99.
105 See Healy, supra note 51 at 680.
107 Id. at 29.
constraints to limit criminalization. In practice, the upshot is that advocacy of crime is protected only as long as the crime at issue is not terrorism-related.

The government’s use of the conspiracy to provide material support statute raises not only First Amendment concerns but also a host of other concerns from the perspective of substantive criminal law.\textsuperscript{108} First, these prosecutions expand criminal liability above and beyond traditional conspiracy doctrines to cover conduct of highly ambiguous nature.\textsuperscript{109} Commentators have long criticized conspiracy law in general as an unjustified expansion of criminal liability.\textsuperscript{110} Conspiracy liability in the terrorism context demonstrates even further enlargement of criminal liability because these prosecutions often do not square with conspiracy law’s main tenets: agreement, overt act and intent.

The agreement requirement, which is the actus reus of the terrorist conspiracy and the cornerstone of conspiracy liability is significantly eroded if the government is not required to establish any evidence that the defendants actually communicated with a terrorist organization.\textsuperscript{111} In a typical conspiracy prosecution, the agreement may be proven circumstantially through concerted action toward a common purpose.\textsuperscript{112} But even this minimal requirement becomes diffused in terrorism-related prosecutions, resulting in banning behaviors falling short of concrete agreements to cooperate with others in the commission of crimes.\textsuperscript{113} The nature of the agreement between the alleged co-conspirators is often highly equivocal given that individuals are charged based on their ambiguous connections with unidentified groups without clear proof of the type of relationship between the co-conspirators and the FTO.\textsuperscript{114}

The overt act requirement is also diluted as the prohibition against providing material support enables prosecution based merely on speech that is perceived as supporting terrorism, but falls short of overt acts in the commission of specified crimes. Conspiracy law’s mens rea of intent is similarly eroded when individuals are prosecuted for running Islamic websites and for dispensing religious opinions where the only proof

\textsuperscript{114} Id. at 493 (noting the risks of expanding conspiracy liability).
of criminal intent is the content of their speech.\textsuperscript{115} No separate evidence is required to prove the defendants’ intent to agree with the terrorist organization to commit any crimes. Prosecution of terrorism-related conspiracies thus poses particular threats in casting too broad a net, raising significant risk that protected speech will be used to prove nonexistent conspiracies.\textsuperscript{116} The upshot of expanding conspiracy liability is that criminalization is grounded on pre-inchoate liability, prohibiting the mere preparatory stages before liability under traditional conspiracy doctrines could have been attached.\textsuperscript{117}

Second, an additional concern stemming from criminal law theory rests with grounding criminal liability on associational conduct. Prior to the Court’s decision in \textit{HLP}, associational conduct could be punished only when there was evidence that a defendant had specific intent regarding an organization’s specific criminal ends.\textsuperscript{118} Traditional complicity doctrines criminalize only aiding and abetting that are directly linked to commission of specific crimes.\textsuperscript{119} The Court’s decision in \textit{HLP} significantly reduced constitutional protection against guilt by association by relying on a dubious distinction between mere membership in an organization and actual provision of support to the organization.\textsuperscript{120} This distinction, however, is notably weak, allowing the government to circumvent the prohibition against guilt by association.\textsuperscript{121} Under the material support statute criminal liability is grounded merely on an organization’s status as a terrorist group. Following HLP, any type of relationship between an individual and the FTO would amount to provision of material support, without requiring the government to prove the perpetrator’s particular contribution to the FTO’s specified crimes.

An initial intuition many readers may share is that speech is overcriminalized only in the limited context of national security, where terrorism’s grave threats should trump

\end{itemize}
individuals’ speech rights while outside this specific area speech is broadly protected. This assumption, however, is false. The scholarly focus on the criminalization of terrorism-related speech overlooks the broader ramifications of overcriminalizing speech above and beyond the terrorism context. Legislatures’ general trend towards preventive law enforcement has also resulted in an increase in endangerment speech offenses in additional areas as the following sections demonstrate.

2. Attempt

Another facet of the overcriminalization of speech problem concerns the expansion of traditional attempt doctrines. Attempt doctrine embodies an important constraint under which the prosecution is required to establish that the defendant engaged in conduct constituting a substantial step toward the commission of the crime. Some criminal statutes, however, adopt a sweeping position, obscuring the crucial boundary between mere preparatory acts, which are not the proper subject of criminal liability, and attempts, which mark the point where criminal liability attaches. Under these statutes criminal sanction may be imposed at a much earlier stage to cover the pre-inchoate offense stage. This often results in criminalizing an actus reus that consists merely of ambiguous and equivocal speech, unaccompanied by any acts that establish the defendant’s dangerousness, as the following statute demonstrates.

Sexual predators who lure minors into engaging in sexual acts have become a growing concern for the criminal justice system in light of the proliferation of cyberspace communication. Responding to these concerns, Federal law adopted a criminal provision aimed at the early targeting of sexual predators by thwarting the threat that the communication between perpetrator and minor would materialize into sexual abuse of the minor. 18 U.S.C. § 2422 (b) prohibits the following:

*Whoever, using the mail or any facility of means of interstate or foreign commerce... knowingly persuades, induces, entices or coerces any individual who has not attained the age of 18 years, to engage in prostitution or any sexual activity for which any person can be charged with a criminal offense, or attempts to do so, shall be fined...and imprisoned not less than 10 years or for life.*

---

122 See Model Penal Code §5.01 (1) (c) (defining attempt to require a substantial step).
123 See Ashworth and Zedner, supra note 117 at 545 (noting the expansion of liability to the pre-inchoate stage).
The justification for law enforcement’s preemptive intervention to prevent sexual abuse of vulnerable minors is uncontested, as these heinous crimes warrant the most severe criminal punishment. The controversial issue, however, is how early in the course of communication between perpetrator and minor the law may intervene and what evidence suffices to demonstrate that the perpetrator has taken a substantial step towards commission of a sex crime. The circuit split concerning the proper scope of the above statute sharpens these questions, as the cases below demonstrate.

In *U.S. v. Rothenberg* the defendant was convicted of two counts of attempting to induce or entice a minor to engage in illicit sex. In one case, he communicated in an Internet chat room with a 19-year-old male, discussing the idea of having sex with his 16-year-old brother. In the second case, the defendant advised an adult male how to engage in sexual acts with his 8 and 11-year-old sons. The Eleventh Circuit upheld the conviction, rejecting the defendant’s theory that mere sexual talk unaccompanied by some overt conduct may constitute a substantial step necessary for an attempt to commit the offense. The court further held that the statute does not require proof of direct communication with a minor and that dealing with an adult intermediary for the purpose of attempting to entice a minor into having sex with the defendant or some third party is sufficient to satisfy the elements of the statute.

The *Rothenberg* court’s holding is troubling in several respects. First, it significantly expands existing attempt doctrines. The court adopts the government’s broad reading of the statute, upholding the criminalization of a sexually solicitous communication, without accompanying action. Moreover, the statute’s overbroad wording captures all types of sexual communication concerning minors, even when minors themselves are not a part of the communication, which takes place between consenting adults. Under this approach, sexual communication about a minor in itself constitutes a substantial step toward commission of the target offense.

---

125 *U.S. v. Rothenberg* 610 F. 3d 621, 623 (11th Cir. 2010).
126 *Id.* at 626-7.
127 *Id.* at 626.
128 *Id.* at 627.
Furthermore, the court holds that mere sexual speech, without evidence demonstrating either the likelihood of harm to a minor or the perpetrator’s dangerousness, amounts to a substantial step towards committing the target offense. In holding so, the court virtually obliterates attempt doctrine’s substantial step requirement, which is designed to ensure that a defendant had crossed the boundary between harmless speech and dangerous action. Instead, criminal liability is expanded here to include the preparatory stages that an offender engages in before taking any substantial step. The upshot is that an actor who has not yet committed himself to having sex with a minor would be criminally liable based merely on sexually based speech.

Second, one of the unintended consequences of an expansive reading of the statute at issue concerns criminalizing improper thoughts rather than dangerous acts. Imposing criminal liability based solely on verbal discussion of abstract ideas obfuscates the core distinction between actions and thoughts, which is one of the fundamental tenets of the criminal law.\(^{129}\) Playing out sexual fantasies over the Internet does not rise to the level of taking a substantial step toward having sex with a minor. Moreover, grounding criminal liability based on some unquantifiable risk that the speech may lead to sexual abuse is an unjustified expansion of the criminal law. Criminalizing risk creation behavior is warranted only when there is substantial probability that the sexual speech would lead to dangerous action.

In contrast with the Eleventh Circuit’s approach, the Seventh Circuit rejects a governmental attempt to interpret the statute at issue expansively, refusing to impose criminal sanction on speech falling short of dangerous conduct. In *U.S. v. Gladish*, a 35-year-old man was caught in a sting operation in which a government agent impersonated a 14-year-old girl in an Internet chat room.\(^{130}\) Gladish visited the chat room, attempting to solicit “Abagail” to have sex with him. In a typical prosecution based on such an operation, the defendant, after obtaining consent, goes to meet his party and is arrested upon arrival. However, Gladish was arrested before making any concrete travel plans.

Reversing Gladish’s conviction, Judge Posner used harsh words to express his dissatisfaction with the government’s decision to prosecute the case. Posner rejected the

\(^{129}\) See Douglas Husak, Rethinking the Act Requirement 28 Cardozo L. Rev. 2437, 2444 (2007) (discussing the act requirement’s role in criminal law).

\(^{130}\) 536 F. 3d 646 (7th Cir. 2008)
prosecution’s theory that Gladish’s behavior satisfied the elements of the offense of attempting to entice a minor, noting that the charges were based only on Gladish’s cyberspace communication with “Abagail”, without any indication of his intention to meet or have sex with her.\textsuperscript{131} Posner noted that Gladish might have believed he was playing out a fantasy, which is common in Internet relationships.\textsuperscript{132} Posner further stressed that “treating speech (even obscene speech) as the ‘substantial step’ would abolish any requirement of a substantial step.”\textsuperscript{133} Instead, added Posner, the defendant must take some specific actions beyond speech, such as agreeing on a time and place for the meeting, making a hotel reservation or buying bus or train ticket, none of which were taken by Gladish.\textsuperscript{134} Posner noted that the defendant’s dangerousness is the main purpose behind punishing attempts, and that the substantial step requirement demonstrates it, marking the perpetrator as genuinely dangerous, “a doer and not just one of the ‘hollow men’ of T.S. Elliot’s poem, incapacitated from action.”\textsuperscript{135}

The above circuit split stems from a doctrinal disagreement about the nature of the complete crime of enticing a minor to engage in illicit sex. Judge Posner’s reading implies that in order for the enticement offense to be complete, the government must prove that the defendant actually had sex with the minor.\textsuperscript{136} In contrast, Judge Hodge’s reading in \textit{Rothenberg} implies that the actus reus of the complete offense consists merely of the successful verbal persuasion of a minor, which is in itself an inchoate speech-based crime. Under the latter position, the victim’s state of mind -- assent-- constitutes the complete enticement, rather than the sex act itself, therefore enabling the government to prosecute attempts at an earlier point in time, based on speech alone. The U.S. Supreme Court has not yet resolved the circuit split concerning the scope of the above statute.

\textbf{B. Anticipatory/Independent Endangerment Crimes}

Risk creation speech crimes consist not only of inchoate crimes but also of independent endangerment offenses that separately criminalize as a complete crime the

\begin{itemize}
\item \textsuperscript{131} \textit{Id.} at 649.
\item \textsuperscript{132} \textit{Id.} at 650.
\item \textsuperscript{133} \textit{Id.}
\item \textsuperscript{134} \textit{Id.} at 649.
\item \textsuperscript{135} \textit{Id.} at 648.
\item \textsuperscript{136} \textit{Id.} at 649.
\end{itemize}
creation of a risk of future injury. Criminal responsibility under the endangerment rationale holds that one is responsible for endangering another if one’s conduct creates a significant risk of harming that person, even if no harm results from the endangerment.\textsuperscript{137} Numerous criminal statutes prohibit risk creating behaviors, including reckless endangerment, reckless driving and driving under the influence of drugs or alcohol.\textsuperscript{138} A significant portion of these independent endangerment crimes involves prohibitions on expression, providing yet another illustration of the proliferation of speech crimes. The following subsections elaborate on two notable examples of excessive criminalization of endangerment speech.

1. Verbal Harassment and Bullying

Criminal statutes against speech-based harassment and verbal bullying offer salient examples of endangerment speech crimes. While these statutes cover both traditional one-on-one verbal harassment and cyberspace harassment, the following discussion focuses on the latter as a prominent facet of the broader trend towards criminalizing speech-based harassment. Cyberbullying encompasses a broad spectrum of speech disseminated via electronic communication, ranging from threatening and harassing to annoying, offending, gossiping and name-calling.\textsuperscript{139} In recent years, the growing use of cyberspace communication to verbally harass others has led to a host of legislative measures aimed at curbing the problem.\textsuperscript{140} While the vast majority of states have adopted civil measures, predominantly focusing on the liability of schools for students’ bullying, several states have also criminalized verbal harassment, explicitly clarifying that it includes cyberbullying.\textsuperscript{141}

Massachusetts provides a prominent example for a state that passed such a law, with its “Criminal Harassment” statute proscribing the following:

\textsuperscript{140} See Eugene Volokh \textit{One-On-One Speech vs. One-To-Many Speech, Criminal Harassment Law and Cyberstalking}, 107 NW. U. L. Rev. 731, 741-42 (2013) (noting that most courts have upheld these laws).

\textsuperscript{141} See, e.g., Mass. Gen. Laws ch. 265 Section 43 A (a) (2013), 18 PA. CONS. STAT. ANN. § 2709(a) (West 2013); N.Y. PENAL LAW § 240.30 (West, 2013).
(a) Whoever willfully and maliciously engages in a knowing pattern of conduct or series of acts over a period of time directed at a specific person, which seriously alarms that person and would cause a reasonable person to suffer substantial emotional distress, shall be guilty of the crime of criminal harassment...The conduct or acts described in this paragraph shall include...electronic mail, internet communications, instant messages or facsimile communications. 142

The U.S. Supreme Court has not yet examined the constitutionality of any specialized criminal bullying statute. Commentators have begun to criticize these statutes largely from the perspective of the First Amendment.143 However, criminal cyberbullying laws raise not only free speech concerns but also insurmountable problems stemming from substantive criminal law. First, these statutes are at odds with basic tenets of the criminal law. The statute adopted by the Massachusetts legislature criminalizes a host of behaviors that are not specifically defined, potentially raising a lack of fair notice problem. Grounding criminal liability on ambiguous phrases, such as “conduct which seriously alarms” is particularly problematic since it is unclear what the actus reus of the crime consists of. Moreover, the phrase “alarm a person” is notably overbroad, covering a wide range of speech that ought to be constitutionally protected. Such indeterminate language introduces a dangerous degree of uncertainty into criminal prohibitions, which ought to be clear and definite. Furthermore, this term is so broad that determining its precise scope also raises significant vagueness concerns. Grounding criminal liability on such equivocal notions limits individuals’ freedom of action, resulting in a “chilling effect” that may cause them to abstain from engaging in a host of permissible behaviors.

Second, criminal sanctions are not best suited to address the complexities of cyberbullying and to curb its harms. Combating cyberbullying requires changing prevailing social norms through the education of teenagers about its injuries. Criminal law, however, is often ineffective in fostering social change, being an inadequate means for solving social problems. 144 While incarcerating teenagers for cyberbullying sends an expressive societal message, there are less drastic measures for conveying society’s

143 See Lidsky, supra note 139 at 698 (contending that criminal cyberbullying laws are prone to overreaching, suppressing protected speech).
144 See Aya Gruber, Rape, Feminism, and the War on Crime, 84 Wash. L. Rev. 581 (2009) (discussing the shortcomings of criminal sanctions in fostering social change).
condemnation of the phenomenon. Criminal sanctions are not suitable for accomplishing such goals.\footnote{145}{See Ari Ezra Waldman, \textit{Tortmented: Antigay Bullying in schools}, 84 Temple L. Rev. 385, 437 (2012) (explaining why criminal anti bullying statutes are unjustified).}

Criminalization is also problematic in light of the perception that prohibiting cyberbullying is justified as yet another example of a risk creation crime. Ample studies suggest that cyberbullying inflicts serious psychological trauma on victims, justifying the use of various legal remedies.\footnote{146}{See Sameer Hinduja & Justin W. Patchin, Cyberbullying Identification, Prevention, and Response, Cyberbullying Res. Ctr. (2010), available at: http://www.cyberbullying.us/Cyberbullying_Identification_Prevention_Response_Fact_Sheet.pdf} The prevailing view is that the harm caused by cyberbullying is the infliction of emotional distress.\footnote{147}{See Lidsky, \textit{supra note} 139 at 725.} Prohibitions against cyberbullying, however, may also be perceived as one type of endangerment offenses. Viewed this way, cyberbullying is not only a complete offense but it is also an inchoate crime, creating a potential future risk of suicide among victims, resulting from its devastating effects.

A number of studies suggest that cyberbullying has contributed to the suicides of many teenagers.\footnote{148}{Id. at 694.} Some notable examples include Phoebe Prince of Massachusetts, Megan Meier of Missouri, and Tyler Clementi of New Jersey.\footnote{149}{See Naomi Harlin Goodno, \textit{How Public Schools Can Constitutionally Halt Cyberbullying}, 46 Wake Forest L. Rev. 641, 645-46 (2011) \ See Waldman, \textit{supra note} 145, at 436-37} Criminal statutes against cyberbullying rest on the assumption that there is a direct connection between teenagers’ suicides and cyberbullying, and that criminalization provides a preventive measure aimed at reducing the risks associated with bullying’s fatal effects.\footnote{150}{See Brenner \textit{supra note} 41 at 82 (rejecting criminalization of inflicting emotional harm).}

Criminalizing cyberbullying based on the endangerment rationale exemplifies an unwarranted trajectory toward expanding the scope of endangerment speech crimes. To be sure, my critique of criminal cyberbullying statutes nowhere suggests that cyberbullying is not an extremely harmful conduct inflicting serious psychological injuries. Contrary to several commentators who believe that the infliction of emotional distress does not warrant criminalization, I do not contend that this type of harm never justifies criminal prohibition.\footnote{151}{See Brenner \textit{supra note} 41 at 82 (rejecting criminalization of inflicting emotional harm).} The following reasons, however, demonstrate why for the most part, cyberbullying is just not one of the cases justifying criminal sanction.
First, criminalizing cyberbullying is in tension with criminal law theory that generally rejects negligence as sufficient mens rea. Under contemporary criminal law the default mens rea is typically recklessness, requiring a conscious disregard of a substantial and unjustifiable risk of harm. Commentators note that psychological research shows that much crime is the product of normal adolescent development and that adolescents often engage in common childhood wrongdoing, making ill-considered decisions due to their susceptibility to negative influences and outside pressures. Perpetrators of cyberbullying are typically immature teenagers, often not fully aware of the consequences of their risky behaviors. These young perpetrators’ mens rea is ambiguous, typically falling short of intent, awareness or even conscious disregard of a substantial and unjustifiable risk of inflicting substantial harm. Criminalizing cyberbullying is thus grounded on a mens rea of negligence, which is an unwarranted expansion of criminal liability.

Second, grounding criminal liability on the endangerment justification raises insurmountable problems of causation. Arguably, since an independent actor -- the bullied victim -- intervenes by causing her own death, perpetrators cannot reasonably foresee this consequence, as they often lack actual awareness that their behavior would lead others to commit suicide. Suicide is too remote and unforeseeable consequence of bullying. Proving the nexus between the cyberbullying and the ensuing suicide beyond a reasonable doubt is an impossible requirement to meet at a criminal trial.

Finally, criminal statutes against cyberbullying are unwarranted because they are passed in response to public outcry exerting political pressure on legislatures to provide harsh criminal sanctions. Commentators have long noted the role that strong emotions -- mainly fear, anger and hatred -- play in promoting legislation aimed at solving pressing social problems. Examples of statutes that draw heavily on communities’ outrage

---

153 Id. at 933-35.
155 See Waldman, supra note 145 at 431-33 (discussing causation problems).
include not only cyberbullying but also terrorism and pedophilia. In response to several high-publicized bullying-related suicides, legislatures have adopted excessively severe measures in an attempt to appear “tough on bullying”. The Massachusetts experience is illustrative. Phoebe Prince, a Massachusetts 15-year-old girl, was subject to relentless taunts and verbal assaults from fellow students at her high school, before she hung herself. Prince’s suicide received national attention, creating a media buzz and a major public uproar attributing the suicide to the torturous bullying. Shortly thereafter, Massachusetts has adopted the above specialized criminal harassment statute, designed to target the perceived risk of suicide.

2. Instructional Speech

Instructional speech consists of speech that gives people factual information that can assist them in the commission of crimes. Examples include the dissemination of information explaining how to make bombs, cook methamphetamine, grow marijuana and evade taxes. Criminally instructional speech consists of two categories. First, speech that results in the commission of a crime may be prosecuted under aiding and abetting statutes. Second, speech that has not yet resulted in the commission of a specific crime, but creates a risk that a crime might be committed in the future. The Supreme Court has not yet squarely confronted the scope of First Amendment protection

---

159 See Ahrens, supra note 156 at 1696 (discussing legislative responses to suicides).
162 See Waldman, supra note 145 at 386-87.
163 See Volokh, Crime Facilitating Speech, 57 Stan. L. Rev. 1095, 1097, 1103 (2005) (noting that instructional speech also consist of information on how to commit other harmful conduct such as torts).
166 Id.
Many lower courts, however, uphold instructional speech restrictions, noting that they do not implicate the First Amendment.\(^\text{168}\)

Criminal prohibitions against instructional speech manifest yet another example of overcriminalizing speech. The following case is illustrative. In 1999 Congress passed an amendment to the Antiterrorism and Effective Death Penalty Act (“AEDPA”).

The amendment provides in pertinent part:

(2) Prohibition. It shall be unlawful for any person --
(A) to teach or demonstrate the making or use of an explosive, a destructive device, or a weapon of mass destruction, or to distribute by any means information pertaining to, in whole or in part, the manufacture or use of an explosive, destructive device, or weapon of mass destruction, with the intent that the teaching, demonstration, or information be used for, or in furtherance of, an activity that constitutes a Federal crime of violence;\(^\text{169}\)

In *U.S. v. Austin* the defendant was prosecuted under the above statute for material posted on his website, titled “raise the fist.”\(^\text{170}\) The site expressed the defendant’s anarchist views and included a “Reclaim Guide” with instructions for disrupting International Monetary Fund and World Bank events. The guide, which the defendant claimed not to have written himself but to have copied from another website, contained sections on “Police Tactics and How To Defeat Them” and “Defensive Weapons” that included bombmaking instructions. Austin was convicted and sentenced to one year in federal prison.\(^\text{171}\)

The *Austin* case demonstrates the risks of prohibiting expansive categories of criminally instructional speech. By classifying viewpoints posted on the Internet as criminally instructional speech, the statute enables the criminalization of speech based merely on the possible potential for harm flowing from its content, even if such harm is only slightly probable. The broadly worded statute enables conviction even in cases where there is no evidence that anyone is *likely* to use the instructions or that the

\(^{169}\) 18 U.S.C section 842 (p) (2) (2000).

\(^{171}\) See David Rosenzweig, Man Gets 1 Year for How-To on Explosives, L.A. Times, Aug. 5, 2003, at B3.
defendant intended for anyone to use them. The use of the statute as applied to the defendant’s conduct in this case violates his constitutional right to speak. Prohibiting criminally instructional speech may sometimes be justified to prevent the risks of grave harms, thus making the statute facially constitutional. For example, holding an individual criminally liable for providing another with detailed instructions on how to commit suicide bombing, intending that he commit a terrorist act, is uncontested, even if eventually the bomb did not go off. But criminalization ought to be limited to cases where there is proof of the speaker’s dangerousness including his intent to assist in the commission of a crime as well as evidence demonstrating substantial probability that the speech might facilitate the crime the speaker intended. Since Austin was resolved in a plea agreement, it remains unclear whether the government had sufficient evidence to prove these requirements.

C. Possession Crimes

The widespread use of cyberspace communication has resulted in a notable increase in the availability of child pornography on the Internet. Acknowledging that children are a vulnerable group deserving unique protection has led to a uniformly severe legislative response, consisting of not only statutes that criminalize the production and distribution of child pornography but also criminal sanctions on privately possessing such materials. In Osborne v. Ohio the Court held that possession of child pornography is not constitutionally protected under the First Amendment, upholding criminalization based on the endangerment rationale. Possession of child pornography is perceived as a risk creating behavior, consisting mainly of three types of risks. First, child pornography fuels viewers’ sexual fantasies, which can incite them to commit sexual

---

172 This paper raises “as applied” as opposed to facial challenges to the speech-based statutes at issue. See generally, Richard H. Fallon, Jr., As Applied and Facial Challenges and Third Party Standing, 113 Harv. L. Rev. 1321, 1322 (2000) (summarizing the distinction between facial and as applied challenges).

178 See Hessick, supra note 56 at 869-73.
offenses against children. Second, pedophiles use child pornography to “groom” children by convincing them that having sex with adults is acceptable. Third, possession of child pornography both creates and supports a market for the material, encouraging its further creation with the accompanying exploitation of children.

The justifications for current laws’ harsh penalties on possession of child pornography are highly disputed among social scientists. Commentators suggest that existing empirical evidence fails to conclusively establish a causal link between mere possession of child pornography and actual contact offenses involving molestation of children. A detailed assessment of these arguments exceeds the scope of this Article. For present purposes, suffice it to say that current child pornography laws conflate different types of harms. The production and distribution of child pornography involves the actual sexual abuse of children, inflicting the most severe harms. The protection of children from such irreparable injuries justifies the harshest criminal sanctions, and this Article does not take issue with these statutes. The alleged harms stemming from private possession of child pornography, however, are much more ambiguous, given the lack of clear evidence that there is substantial probability that viewing child pornography leads to sexual offenses against minors.

But even assuming that severe criminal penalties on private possession of child pornography are warranted, significant problems remain concerning the enormous scope of child pornography prohibitions and the precise definition of the images falling under it. These statutes contribute to the overcriminalization of speech because they often sweep within their reach innocuous materials that do not harm children. The problem stems from the overbroad and vague nature of these statutes. The phrase “child pornography” is broadly defined to cover not only actual sexual acts with children but also sexual

---

180 Id.
183 Id. at 1715.
184 Osborne v. Ohio 495 U.S. 103, 108-10, 112-14 (1990) (upholding the constitutionality of an Ohio statute that makes it a crime to “[p]osses or view any material or performance that shows a minor who is not the person's child or ward in a state of nudity”).
images of minors, involving mere nudity. Arguably, possessing such images does not implicate the above justifications for banning possession of child pornography.

Furthermore, as suggested earlier, the overcriminalization of speech stems not only from passing overbroad statutes, but also from prosecutorial overreaching. Existing child pornography statutes enable prosecutors to further expand criminalization above and beyond the traditional rationales justifying these prohibitions. One notable illustration of such prosecutorial overreaching involves charging teenagers for **consensual** sharing of sexually explicit photos via the Internet or cell phones, commonly known as sexting. The dissemination of any sexual material involving minors technically falls under the scope of child pornography laws. Criminal charges brought against adolescents for sexting each other, however, are often unjustified because their behaviors fall short of risking actual abuse of children. When two teenagers consensually exchange explicit photos of themselves, none of the justifications for criminalizing possession of child pornography is present since the rationale of protecting an innocent child from an adult sexual predator is absent. Prosecuting sexting thus often results in charging adolescents with crimes even though their conduct does not amount to criminal wrongdoing. In light of the devastating effects of a criminal conviction on an adolescent’s future, stemming from the host of collateral consequences following conviction such as the “sex offender” label, the dangers of overcriminalizing this type of speech are disconcerting.

II. THEORIES EXPLAINING THE ABSENCE OF FIRST AMENDMENT SCRUTINY

The preceding part demonstrates that the federal government and the states adopt numerous statutes that prohibit various forms of speech. At first blush, this finding may seem surprising in light of common perceptions concerning the scope of free speech protections under the Constitution. Conventional wisdom holds that the Court’s First Amendment jurisprudence is strongly protective of speech. However, a closer look at the speech crimes discussed above illustrates that this generalization is inaccurate. The false assumption concerning the allegedly broad protection of speech obscures current criminal law’s trajectory, which is, in reality, far less protective of speech than many commentators assume. The following subsections explain why First Amendment doctrines fail to cover a host of speech crimes.

A. Speech Act Doctrines and Their Critique

Constitutional theorists have long identified a division between speech and conduct, noting that the First Amendment protects the former but not the latter. Thomas Emerson has contended that while expression and action are always mingled and most conduct involves both, the “predominant element” in a course of conduct can be identified and First Amendment thereby determined. Speech is presumptively beyond governmental regulation when it possesses communicative qualities, expressing thoughts, ideas and viewpoints. In contrast, conduct implicates little or no communicative value thus not triggering any First Amendment considerations and enabling the government to regulate it to effectuate significant interests such as harm prevention.

Prosecutions Violate Teenagers Constitutional Rights? 48 San Diego L. Rev. 951, 955 (2011) (noting that the Court has not yet ruled on the constitutionality of these prosecutions).

But Cf. Erwin Chemerinsky, Not a Free Speech Court, 53 Ariz. L. Rev. 724, 734 (2011) (noting that the Roberts Court is not a speech protective court).

Id. at 80-86 (explaining the doctrinal distinction between speech and conduct).

See Eberele supra note 197 at 1194.
1. Speech Integral to Criminal Conduct

The 1949 U.S. Supreme Court decision in *U.S. v. Giboney* stands for the proposition that “speech brigaded with action” is not constitutionally protected under the First Amendment. The decision concerned the constitutionality of a Missouri law criminalizing “…any…combination…or understanding…in restraint of trade or competition in the transportation, manufacture, purchase or sale of any product or commodity.” The state attempted to use the law to enjoin union members from peaceful picketing carried on as an essential part of a course of conduct in violation of state law. The Court affirmed the conviction, holding that

...it rarely has been suggested that the constitutional freedom for speech and press extends its immunity to speech or writing as an integral part of conduct in violation of valid criminal statute...it has never been deemed an abridgment of freedom of speech or press to make a course of conduct illegal merely because the conduct was in part initiated, evidenced or carried out by means of language, either spoken, written or printed.

Courts have often cited *Giboney* to justify a wide variety of restrictions on speech, including criminal statutes on conspiracies, solicitation, aiding and abetting and more. The “speech integral to criminal conduct” exception has been used to target conduct that is viewed as specific tools used for the purpose of causing harm. For example, one court relied on *Giboney* in allowing liability for publishing a book that describes how to commit contract murder. *Giboney*’s exception, however, has not received any doctrinal articulation in more recent U.S. Supreme Court cases; the Court merely cites *Giboney* to support its decisions refusing to protect certain types of speech, without providing guidelines on the scope of the exception. Scholarly treatment of

---

200 *Id.* at 491-92.
201 *Id.* at 498.
202 See Volokh, supra note 21 at 1283. While the distinction between speech and conduct is not limited to the criminal context, in this Article I focus solely on criminal prohibitions on speech because of the nexus between the overcriminalization of speech argument and doctrines grounded in speech acts. See Schauer, supra note 19 at 1766-67, 1801-02 (noting that both civil and criminal statutes implicate various restrictions on speech, requiring legislatures to draw the line between the communicative and noncommunicative elements of certain acts.)
203 Giboney, 336 U.S. at 498; see also Volokh, supra note 21 at 1283.
204 See Rice,128 F.3d at 243.
*Giboney* has also proved unhelpful in clarifying its scope as commentators have not developed a coherent doctrinal framework grounded in this exception.  

Given the difficulties in determining the distinction between speech and conduct, most commentators now recognize the fallacy of such division, arguing that definitively categorizing every behavior as either “speech” or “conduct” is not a feasible task. Words are often the exclusive means of prohibited forms of conduct, and conversely, conduct often expresses viewpoints and ideas. As John Hart Ely has noted, burning a draft card to express political protest against the government’s policy is 100% action and 100% expression, and therefore attempts to determine which element “predominates” will degenerate into judgments about whether the activity should be protected. Commentators conclude that the “speech-conduct” distinction is unable to distinguish between speech that warrants free speech protection and one that does not. Instead, commentators have endeavored to develop an alternative analytical framework to determine which speech ought to be subject to First Amendment scrutiny.

2. Generally Applicable Laws

One doctrinal account attempting to explain which types of speech justify criminal sanction relies on the “generally applicable laws” argument. Speech should not be constitutionally protected when a generally applicable law that restricts all conduct that has similar harmful effect covers the prohibited behavior. This speech may be criminalized because it is the act by which one either violates an independent criminal prohibition, seemingly referring to prohibitions unrelated to speech, or facilitates the violation of such prohibition. For example, publishing a book with the intent to help readers commit a crime is punishable under generally applicable aiding and abetting law.

212 See *Volokh, supra note* 21 at 1281.
213 Id. at 1282 (noting that some commentators suggest that generally applicable laws should be treated as content-neutral restrictions).
because this speech is simply the means of committing a criminal offense or the evidence of the crime.\textsuperscript{215}

A slightly different variation of this account draws on the Court’s seminal decision in \textit{U.S. v. O’Brien}.\textsuperscript{216} O’Brien concerned a man who burned his draft card as part of a public antiwar protest, and was convicted under a Federal law prohibiting the intentional destruction of Selective Service registration certificates.\textsuperscript{217} The \textit{O’Brien} Court announced the following three-element test to determine when the state may ban speech: 1. if the statute furthers an important or substantial governmental interest; 2. if the governmental interest is unrelated to the suppression of free expression; and 3. if the incidental restriction on alleged First Amendment freedoms is no greater than is essential to the furtherance of that interest.\textsuperscript{218}

The \textit{O’Brien} test sets a key distinction in First Amendment jurisprudence between content-neutral and content-based restrictions on speech.\textsuperscript{219} Speech consisting of expressive conduct may be restricted because of harms flowing from its noncommunicative component, which is content-neutral. Examples include the destruction of Selective Service system, obstruction of traffic and noise violations.\textsuperscript{220} However, speech may not be restricted because of harms flowing from its communicative component, which is content-based, unless these restrictions fall under one of the recognized exceptions to free speech such as incitement, threats and obscenity or pass the strict scrutiny test.\textsuperscript{221}

Relying on \textit{O’Brien}, courts and commentators focus their attention on the government’s motives in regulating speech.\textsuperscript{222} If the government’s motives may be independently grounded on justifications unrelated to speech, then the criminal ban passes constitutional scrutiny. But if the government’s motives are related to the suppression of disfavored messages and silencing political dissent, the statute fails strict

\begin{footnotesize}
\begin{enumerate}
\item See Rice 128 F. 3d at 243.
\item Id. at 369.
\item Id. at 377.
\item Id. at 382 (noting that the restriction implicates only the non-communicative impact of the conduct).
\item See Volokh, supra note 21 at 1278.
\item Id. at 1314.
\item See Kahan, supra note 208 at 856.
\end{enumerate}
\end{footnotesize}
scrutiny review.\textsuperscript{223} Under this account, generally applicable laws should be treated similarly to content-neutral restrictions on expressive conduct, and thus should be upheld under \textit{O’Brien} as speech restrictions that are incidental to the law’s overall thrust.\textsuperscript{224}

The problem with the “generally applicable laws” doctrine, however, is that it enables criminalization of content-based restrictions on speech without subjecting them to First Amendment scrutiny.\textsuperscript{225} As the examples in Part I demonstrate, the speech at issue there is criminalized based on its communicative message, namely, because its content informs, persuades, or offends others, and because of the harms that flow from this informing, persuasion, or offense. Yet, the “generally applicable laws” doctrine excludes First Amendment analysis from many speech restrictions even though they target speech precisely because of the content that speech communicates. Criminalizing speech based on its content is in tension with the \textit{O’Brien} test, under which speech cannot be restricted because of the harm that flows from its content unless it passes strict scrutiny.\textsuperscript{226}

Moreover, generally applicable prohibitions cannot be upheld as facially content-neutral when they are content-based \textit{as applied}.\textsuperscript{227} When the prohibition is triggered based on the harm stemming from the content of the speech, First Amendment scrutiny should apply.\textsuperscript{228} Instead of relying on the “generally applicable laws” standard, the relevant question that ought to determine the scope of free speech protection should be whether the statute at issue prohibits speech because of the harm that flows from its content.\textsuperscript{229} When a statute punishes speech because the harms are caused by the persuasive, informative or offensive elements of the opinions expressed, that statute should be treated as a content-based restriction on speech and therefore subject to full-fledged First Amendment scrutiny.\textsuperscript{230} Furthermore, the usual free speech considerations should apply here, including mainly the type of harm that speech may cause, the value of

\end{thebibliography}
the speech and the risk that the restriction would create a chilling effect, resulting in prohibiting permissible forms of speech.231

An additional drawback of the “generally applicable laws” doctrine is that the government’s motives have only limited relevance in assessing the constitutionality of speech restrictions. The examples set forth in Part I illustrate that the government’s motives for regulating speech appear perfectly legitimate and unrelated to suppressing political dissent.232 Legislatures often have ample bases for adopting generally applicable prohibitions and there is no basis for suspecting that they had any impermissible motivation with regard to suppressing speech.233 For example, aiding and abetting statutes are motivated by promoting social goods that can be defined independently of the government’s hostility to disfavored ideas.234 But even when legislatures’ motivations are not grounded on impermissible considerations, the result of adopting generally applicable prohibitions is often sweeping among others content-based restrictions on speech.235 Statutes should therefore be presumptively unconstitutional when applied to speech based on its content, regardless of whether they are well motivated and benign. These may be upheld only if they pass strict scrutiny review, similarly to statutes that on their face adopt content-based restrictions.

3. Situation-altering Utterances

An elaborate doctrinal explanation for the absence of free speech protection from many speech acts is developed in Kent Greenawalt’s book Speech, Crime & The Uses of Language.236 Greenawalt distinguishes between “assertions of fact and value,” which are statements about the way things are or should be, and are entitled to full First Amendment protection, and “situation-altering utterances,” which are ways of doing things, changing the world by altering normative obligations, and are not entitled to First Amendment protection.237 The latter category includes—among others—offers, agreements, orders, permissions and threats, which are tantamount to conduct and are

234 Id. at 1301.
235 Id. at 1301-1303.
236 See GREENAWALT, supra note 22.
237 Id. at 43-44.
subject to civil and criminal regulation.\textsuperscript{238} Greenawalt identifies four factors that may explain the circumstances under which the First Amendment applies: speech that is public rather than private, speech that is inspired by the speaker’s desire for social change rather than for private gain, speech relating to something general rather than to a specific transaction and speech that is normative rather than informational in content.\textsuperscript{239} Conversely, these factors explain the absence of free speech coverage in circumstances where the speech is face-to-face, informational, particular and for private gain.

Greenawalt’s theory, however, is also unable to provide a sufficient conceptual framework that explains the absence of First Amendment scrutiny from the speech crimes discussed in Part I. One problem with this theory for today is that it is dated and does not account for the vast changes that have occurred since it was formulated in 1989. These changes include a significant increase in the scope of speech offenses, in the terrorism context as well as in other areas.\textsuperscript{240} These changes also consist of technological advancement affecting the nature of speech, mainly the enormous explosion in the use of the Internet as a primary form of speech. These legal and technological changes are not considered in Greenawalt’s proposed factors for distinguishing between protected and unprotected speech. For example, the spread of cyberspace communication has significantly blurred Greenawalt’s distinction between face-to-face communication and a general appeal to the public at large. Much speech in today’s virtual world, however, consists of expression that is publicly available on the Internet, reaching unidentified audience. Greenawalt’s theory fails to explain why a publication on the Internet, providing information on how to commit crimes may be criminalized even though this speech is targeted towards the public at large rather than towards a specific perpetrator.

B. Categorical Exclusion as Coverage and Its Critique

Professor Frederick Schauer has offered a broader framework for considering speech falling outside the boundaries of the First Amendment.\textsuperscript{241} Schauer’s analysis first distinguishes between free speech protection and free speech coverage.\textsuperscript{242} The question

\textsuperscript{238} Id. at 43-44, 57.
\textsuperscript{239} Id. at 676, 742-56.
\textsuperscript{240} See supra Part I. A-C.
\textsuperscript{241} See Schauer, supra note 19 at 1766-68.
\textsuperscript{242} Id. at 1769.
of coverage, argues Schauer, consists of a preliminary inquiry asking whether an event that involves “speech” in the ordinary use of the word presents a First Amendment issue.\(^{243}\) Although the First Amendment broadly refers to “speech” much speech remains completely uncovered by it.\(^{244}\) Only once the First Amendment covers certain type of speech, the question of its protection comes into play.\(^{245}\) Schauer notes that numerous verbal acts such as criminal solicitation, criminal conspiracy and other forms of verbal participation in and facilitation of crime do not present any First Amendment inquiry.\(^{246}\) Importantly, under this account, the entire class of speech acts is categorically excluded from First Amendment scrutiny. Since whole categories of speech crimes lie well beyond the boundaries of the First Amendment, the arsenal of protections provided by free speech doctrines do not show up in the analysis.\(^{247}\)

Schauer further contends that no single theory or doctrinal principle explaining the First Amendment coverage has yet been found.\(^{248}\) The explanation for the lack of free speech coverage, argues Schauer, lies not only in legal doctrine.\(^{249}\) Instead, it lies in the combination of doctrines and a complex array of non-legal, non-doctrinal factors, including political, cultural and economic considerations determining which speech the First Amendment covers and which it does not.\(^{250}\)

There are, however, several problems with this approach. First, it is mostly descriptive rather than prescriptive. Describing numerous forms of speech as uncovered by the First Amendment with only a small portion of speech subject to strict scrutiny review says little with respect to the normative question of whether speech acts should be subject to First Amendment analysis. Schauer’s account does not explain whether the categorical exclusion of First Amendment scrutiny from all speech acts is indeed a proper approach from a normative perspective. Moreover, while the theory unfolds the broad political and institutional reasons for subjecting certain speech to First Amendment

\(^{243}\) Id. at 1769.
\(^{244}\) Id. at 1771.

\(^{247}\) Id. at 1769.
\(^{248}\) Id. at 1786.
\(^{249}\) Id. at 1787.
\(^{250}\) Id. at 1800-01.
scrutiny, it does not provide a separate scheme consisting of legal criteria for distinguishing between different types of speech.

The categorical exclusion account also lacks practical utility because of its indeterminate nature. This theory falls short of offering an analytical framework that would be able to draw, in advance, a principled legal boundary between speech that warrants free speech protection and one that does not. This account thus leads to inconsistent outcomes, and are unable to explain why some communicative messages are subject to free speech protections, while others are restricted even though both types of speech may result in harmful consequences. Take, for example, the different legal treatment of hate speech and harassing speech. Hate speech, including racist expressions, falls within the boundaries of the First Amendment even though it is clearly harmful, inflicting emotional distress on victims. In contrast, verbal harassment, another type of harmful speech inflicting emotional distress on victims, falls outside the scope of First Amendment coverage and is subject to civil and criminal regulation.

Second, the categorical exclusion account precludes the use of any balancing mechanisms to evaluate the constitutionality of specific examples of speech acts. One of the key distinctions in First Amendment jurisprudence is the division between categorization and balancing. Balancing approaches weigh individuals’ interests in asserting a right against the government's interests in regulating it and determine which interest ought to prevail in a specific case. In contrast, categorization prohibits this kind of weighing of interests in individual cases by inquiring only whether the case falls into certain predetermined, outcome-determinative lines.

Contemporary First Amendment opinions use the rhetoric of balancing of interests rather than categorically excluding entire classes of speech from First Amendment coverage. Commentators thus agree that the balancing approach has generally prevailed, largely replacing categorization as the preferred mode of First

251 See R.A.V, 505 U.S. at 282.
252 See Lidsky, supra note 139 at 695-96 (discussing criminalization of cyberbullying).
253 See Joseph Blocher, Categoricalism and Balancing in First and Second Amendment Analysis, 84 N.Y.U.L. Rev. 375, 384 (2009) (discussing the distinctions between categorization and balancing).
254 Id. at 381.
255 Id.
256 See Rubenfeld, supra note 23 at 779 (noting that contemporary First Amendment opinions are loaded with the rhetoric of balancing).
Amendment protection.\textsuperscript{257} A notable exception to this general preference is current law’s treatment of speech acts, which is still grounded in a categorical approach.\textsuperscript{258} As Part I illustrates, entire classes of speech acts are currently categorically excluded from First Amendment scrutiny. No balancing tests are used when suppressing speech in a given case falling under the speech act classification, regardless of the specific circumstances underlying the specific speech.

The main problem with this categorical exclusion is that it is over-inclusive. It precludes First Amendment scrutiny from specific speech acts that do carry communicative messages and thus might warrant free speech protection. Casting entire categories of speech crimes outside the First Amendment’s ambit, based solely on the prohibition’s classification, impede a more nuanced, case-by-case examination of whether a particular conspiracy, instructional speech or verbal harassment warrants criminal sanction. This wholesale exclusion fails to distinguish between various degrees of harm stemming from different types of speech. For example, the sexting prosecutions discussed above, demonstrate that free speech protection is categorically precluded even from non-harmful expressions since they fall under an uncovered category.\textsuperscript{259} In contrast, a balancing approach weighs competing interests in maintaining free expression on the one hand while assuring security and preventing harm on the other.\textsuperscript{260} A typical strict scrutiny analysis applies such a balancing process, enabling courts to assess whether in specific cases individuals’ liberty to express certain messages should outweigh others’ right not to be harmed by the speech’s potential outcomes. Balancing therefore provides a much-needed flexibility by allowing courts to evaluate the costs and benefits underlying a particular speech on a case-by-case basis.

Third, the categorical exclusion approach does not account for a host of free speech justifications underlying many speech acts. Categorical exclusion is premised on the assumption that speech acts implicate none of the theoretical rationales for protection

\textsuperscript{257} See Blocher, \textit{supra} note 253 at 386 (noting that balancing is the preferred mechanism in First Amendment jurisprudence).
\textsuperscript{258} Id. at 388 (noting that no balancing is needed in a given case for categories such as fraud or crime facilitating speech, which are entirely outside the bounds of free speech).
\textsuperscript{259} See supra Part I. C.
therefore their regulation does not raise any serious First Amendment problems.\textsuperscript{261} This assumption, however, is false. As the examples discussed in Part I demonstrate, many speech acts in fact consist of clearly communicative messages and as such they do implicate important justifications for First Amendment protection.

Consider for example, a website consisting of instructions on how to cultivate marijuana plants in one’s backyard. While the U.S. Supreme Court has not yet resolved the question of the constitutionality of crime facilitating speech, legislatures often assume that such speech may be subject to criminal sanction.\textsuperscript{262} Excluding free speech considerations from all types of crime facilitating speech, however, is highly problematic if the actual purpose behind the publication is not to advocate any illegal action but instead to promote political change concerning the legal regulation of privately growing marijuana. Expressing politically motivated viewpoints by peacefully advocating legal change is the core justification behind free speech protection and therefore should be subject to First Amendment scrutiny. This ideologically grounded speech touches upon ample First Amendment concerns, most notably individuals’ liberty to freely express viewpoints that are disfavored by the government.

C. The Link Between Existing Doctrines and Overcriminalization of Speech

The doctrines discussed above are directly responsible for the overcriminalization of speech for the following reasons. First, exposing the expansive scope of criminal statutes that are not touched by the First Amendment sharpens the fact that the speech with which the First Amendment deals is the exception, while the speech that may routinely be criminally prohibited is the general rule.\textsuperscript{263} The speech that the First Amendment ignores based on speech acts doctrines includes countless areas of content-based criminal prohibitions on speech. Among them lies the vast domain of criminal law dealing with conspiracy, solicitation, attempt, crime facilitation and verbal harassment.\textsuperscript{264} Those numerous speech offenses are precisely the crimes identified in Part I as

\textsuperscript{261} See Kent Greenawalt, “Clear and Present Danger” and Criminal Speech, in Eternally Vigilant: Free Speech in the Modern Era, at 96, 111.
\textsuperscript{262} See Volokh, supra note 163 at 1130 (noting that legislatures assume that this speech may be punished).
\textsuperscript{263} See Schauer, supra note 19 at 1784 (noting that the speech with which the First Amendment is even slightly concerned is but a small subset of the speech that pervades every part of our lives).
\textsuperscript{264} Id. at 1801 (noting that numerous verbal acts stand outside the purview of the First Amendment).
contributing to the overcriminalization of speech. If these widely accepted restrictions on speech become the rule, the inevitable upshot is criminalizing too much speech.

Second, since no single doctrine explains when speech falls within the coverage of the First Amendment, legislatures are granted unlimited discretion to enact an array of criminal statutes, as they see fit. The reason for lawmakers’ unconstrained power is twofold. First, substantive criminal law is predominantly not constitutionalized.265 Constitutional law places very few constraints on the definition of crimes, with limited exceptions concerning speech that is covered by the First Amendment, consensual sexual practices and reproductive rights.266 Scholars have long suggested that constitutional scrutiny ought to be applied to substantive criminal law.267 The criminal law, however, has not yet developed significant constitutional doctrines for checking legislative action. The practical implications of this reality are crucial because different types of judicial review are applied to speech based on its categorization. Speech that is categorized as falling within the boundaries of the First Amendment is subject to strict scrutiny review that imposes much greater burdens than the highly deferential scrutiny of rationality review.268 The vast majority of speech restrictions that are measured against the stringent strict scrutiny review are struck down.269 By contrast, speech acts categorically fall outside the scope of First Amendment coverage, thus they are not measured against the demanding strict scrutiny analysis.270 Instead, they are subject only to rational basis review, the lowest level of judicial scrutiny. Under this test, the government only needs to demonstrate that the statute at issue is "rationally related" to a "legitimate" governmental reason offered as its justification, a standard that is easily satisfied.271 Statutes typically pass that scrutiny, which is very deferential to the government.272 The upshot is that

266 See HUSAK, supra note 9 at 123-24 (noting that most criminal statutes implicate non-fundamental rights thus they are subject only to rational basis review).
267 See Dubber, supra note 265 at 529-530 (advocating constitutional constraints for criminal statutes).
268 See Schauer, supra note 19 at 1770.
270 See Schauer, supra note 19 at 1801-02.
272 U.S. v. Lopez, 514 U.S. 549, 578 (Kennedy, J., concurring, noting the leniency of rational basis review).
speech crimes that are measured against the lenient rational basis review are almost always upheld, therefore directly contributing to the overcriminalization of speech. An additional reason explaining legislatures’ unconstrained discretion stems from the fact that substantive criminal law is not grounded in a comprehensive theory.\textsuperscript{273} Scholars note that there are no conceptual boundaries to criminalization or clear criterion limiting the scope of criminal statutes.\textsuperscript{274} Substantive criminal law, they further note, is not grounded on a coherent framework under which criminalization decisions are based solely on harmful, fault-based culpable conducts.\textsuperscript{275} Moreover, the concept of harm itself eludes definition, allowing criminalization without proof of injury or wrongdoing.\textsuperscript{276} The upshot of the lack of a comprehensive theory of criminalization is that legislatures often succumb to political pressures by enacting statutes that satisfy their constituents’ demands.\textsuperscript{277} In the absence of a theory that constraints legislatures’ crime creation choices, the problem of overcriminalization of speech is further exacerbated.

D. An Alternative Framework for Considering Speech Acts

A notable alternative analytical framework to assess the constitutionality of speech crimes lies in Eugene Volokh’s work.\textsuperscript{278} Volokh rejects the doctrines that are currently used to preclude First Amendment consideration from many speech crimes.\textsuperscript{279} As an alternative to relying on speech acts doctrines, Volokh proposes that all speech crimes be subject to full-fledged strict scrutiny review.\textsuperscript{280} Determining whether any given speech crime warrants constitutional protection, argues Volokh, requires an examination of factors usually considered under a typical First Amendment inquiry, such as the value of speech and the harm that it causes.\textsuperscript{281} For example, in an attempt to consider an independent analytical framework for determining the constitutionality of crime-facilitating speech, Volokh considers possible distinctions within this specific category,

\textsuperscript{274} Id (discussing the absence of a comprehensive theory underlying criminalization).
\textsuperscript{275} Id. at 971.
\textsuperscript{276} Id.
\textsuperscript{277} See Stuntz, supra note 10 at 529-30.
\textsuperscript{278} See Volokh, supra note 21, at 1283.
\textsuperscript{279} Id. at 1284 (rejecting prevailing explanations for excluding free speech protection from many speech crimes).
\textsuperscript{280} Id.
\textsuperscript{281} Id. at 1339.
that would distinguish between protected and prohibited forms of crime facilitating speech. Providing information that is helpful in the commission of a crime, contends Volokh, generally ought to be constitutionally protected unless several limited circumstances apply (when the speech is said to a small group of people and the speaker knows that they are likely to use the information for criminal purposes, when the speech has almost no noncriminal value or can cause extraordinary serious harm).

Volokh’s contribution provides an important starting point for further exploration of the idea of subjecting all content-based speech crimes, regardless of the category into which they currently fall, to First Amendment scrutiny. Volokh himself recognizes that his proposal only outlines the task of delineating the proper constitutional boundaries of speech offenses, and that a considerable amount of work remains to be done. The next part takes up that call to engage in an analytical undertaking that would better draw the line between speech that warrants protection and one that does not.

III. A PROPOSAL FOR LIMITING THE SCOPE OF ENDANGERMENT SPEECH CRIMES

The following proposal advocates the adoption of several constraints to limit the criminalization of speech.

A. External and Internal Constraints On Criminalizing speech

Considering a broader conceptual framework that would limit the scope of criminalization in general, Douglas Husak advocates the adoption of both external and internal constraints on criminal statutes. These external constraints draw on existing constitutional doctrine of judicial review, while the internal constraints draw on criminal law theory itself. The following proposal builds on Husak’s general framework by applying it to the specific area of endangerment speech crimes.

The first key feature of my proposal to limit the scope of endangerment speech crimes calls for extending strict scrutiny review to all of these crimes, including those

---

282 See Volokh, supra note 163 at 1105.
283 Id.
284 Id. at 1286.
285 See HUSAK, supra note 9 at 65-67.
286 Id. at 128-132.
currently viewed as speech acts that are categorically excluded from First Amendment coverage. The proposal substitutes a specialized case-by-case balancing of competing interests underlying specific speech crimes for existing categorical exclusion of free speech coverage based on labeling many types of speech as “speech act”.

Part II elaborates on the arguments justifying the application of strict scrutiny review on all speech crimes.\textsuperscript{287} To reiterate the main points made above, the speech crimes discussed in Part I prohibit speech because of the harm that flows from its content, namely, because of its communicative element. When speech is restricted because the message it conveys informs, advocates or persuades others, these restrictions are content-based and similarly to other fundamental rights they ought to be subject to full-fledged strict scrutiny review.\textsuperscript{288} A typical First Amendment analysis engages in a balancing process between the value of a given speech and the harm it inflicts.\textsuperscript{289} A similar balancing process should also be used to evaluate the constitutionality of all speech crimes, including those currently excluded from First Amendment scrutiny. This balancing should take into account the factors that are generally applicable under a typical First Amendment analysis, such as the magnitude of the harm, the value of speech and the risk that punishing speech would deter constitutionally protected speech.\textsuperscript{290}

Endangerment speech crimes, however, demonstrate why applying only external constitutional constraints may prove insufficient to limit their scope. First Amendment doctrines do not lend themselves to drawing a legal line between behaviors that warrant criminal bans and those that warrant only civil restrictions, such as tort actions, injunctions or administrative measures.\textsuperscript{291} Typically, under a First Amendment analysis, bans on speech are either upheld or rejected, without carving out distinctions between criminal and civil restrictions.\textsuperscript{292} First Amendment scrutiny applies similar standards of review to both types of restrictions without suggesting that the government might enjoy

\textsuperscript{287} See Part II. A.
\textsuperscript{289} Dennis v. United States 341 U.S. 494, 519, 524-25 (Frankfurter, J., concurring, suggesting that free speech demands weighing of the competing interests).
\textsuperscript{290} See Volokh, supra note 21 at 1339 (noting factors generally applicable in a First Amendment scrutiny).
\textsuperscript{292} 376 U.S. at 277.
less constitutional leeway when regulating speech through criminal means.\(^{293}\) In light of this feature of the First Amendment, constitutional constraints on criminalization of endangerment speech crimes must be supplemented with internal constraints.

The proposed limits on endangerment speech crimes should also include several internal constraints stemming from criminal law theory. Professor Husak proposes that these constraints consist of the following factors: criminalization is justified only when criminal statutes target nontrivial harms or evils,\(^{294}\) address only wrongful conduct,\(^{295}\) impose punishment only on offenders who deserve it,\(^{296}\) and carry a heavy burden of proof justifying them.\(^{297}\) While Husak’s proposal outlines an overall framework for limiting the scope of criminalization in general, he also examines several constraints on risk creation offenses.\(^{298}\) Husak’s theory, however, does not recognize that notable examples of risk creation offenses include speech crimes, and thus his analysis does not separately consider these offenses. As the preceding parts demonstrate, endangerment speech crimes raise additional concerns stemming from the fact that they prohibit speech based on the harm that flows from its content. The distinct problems arising from the criminalization of speech are unaccounted for in Husak’s proposal. The following proposal seeks to fill this gap by developing constitutional constraints specifically designed for endangerment speech crimes. In what follows, I will separately consider factors that should be incorporated into strict scrutiny analysis and those that ought to shape internal criminal law constraints.

1. Relevant Factors to Structure Strict Scrutiny Analysis

This section articulates a framework for considering the constitutionality of endangerment speech crimes by offering several guidelines to structure judicial inquiry into the elements of a strict scrutiny analysis.

\(^{294}\) See HUSAK, supra note 9 at 55.

\(^{295}\) Id. at 66.

\(^{296}\) Id. at 82.

\(^{297}\) Id. at 83.

\(^{298}\) Id. at 159 -170 (addressing limits on risk creation crimes).
a. A Probability Test: Substantial Probability of Harm

A key factor in evaluating the constitutionality of endangerment speech crimes should consist of a judicial inquiry into the probability of harm that may flow from the content of the speech at issue. To satisfy strict scrutiny analysis, I propose that the government would be required to establish a clear nexus between the speech in question and the likelihood of harm. More specifically, the government would have to demonstrate that given the content and the context of the speech it wants to ban, there is a substantial probability that the speech would result in grave harm. Requiring such probability test is necessary because criminal sanctions are unjustified in circumstances where speech merely creates a remote possibility or mere tendency for future harm. A probability test thus ensures that only dangerous perpetrators are held criminally liable for their speech.

The probability test advocated here draws on existing probability standards already in use under free speech doctrines. The Court currently employs one probability mechanism in an important line of cases concerning violence-inducing speech. The doctrines embodied in these cases incorporate what commentators refer to as “probability thresholds”. “Probability threshold” sets a predefined lower boundary on how likely a potential harm must be in order for that harm to be assessed in the constitutional analysis. If an event is so unlikely that the probability that it will occur does not cross this threshold, First Amendment doctrine instructs courts to refuse to weigh the expected harm from the event against the benefits that the speech in question is likely to produce. The Brandenburg decision discussed above is the prime example of the Court’s application of “probability thresholds”. Recall that incitement doctrine requires, among others, that the speech be likely to incite violence—an explicit probability threshold that eliminates from consideration all low-probability harms.

While inciting speech is subject to a demanding probability test, probability assessments are currently not incorporated into the Court’s strict scrutiny analysis, which

\[\text{References:}\]

299 See Brandenburg, 395 U.S. at 447.
300 See Jonathan Masur, Probability Thresholds, 92 Iowa L. Rev. 1293 (2007)
301 Id. at 1297.
302 Id. at 1307.
303 Id. at 1306.
lacks an explicit doctrinal probability component. The cases discussed in part I exemplify the implications of the absence of a probability test. These examples demonstrate that courts do not impose any bars against asserting extremely low-probability harms as the basis for suppressing various forms of expression. Criminal prohibitions on speech acts are often based on questionable predictions of dangerousness, without requiring any likelihood that the speech would result in any harm. In the absence of a probability requirement, mere tendency to cause harm or an increase in the propensity of violence suffice for enacting numerous speech crimes. The ultimate result of refusing to incorporate any probability test as a threshold condition for criminalizing these types of speech is the overcriminalization of speech.

Speech restrictions in the terrorism context best illustrate the risks of a failure to include a probability requirement for evaluating the constitutionality of a specific speech crime. As previously noted, while the HLP Court noted that the speech in question increases the probability of a future terrorist attack, it did not require substantial or high likelihood that such grave harm to national security would ensue. The refusal to incorporate a probability test is particularly problematic in the national security context due to what Cass Sunstein dubs “probability neglect”: the tendency among policy makers to disregard probability assessments when making decisions under indeterminate conditions. This type of bias, the argument continues, is especially prominent when considering the probability of events that trigger the public’s strong emotional responses such as terrorism. Several factors explain how the importance of low-probability threats is exaggerated. First, the government tends to inflate the risks of low-probability speech it attempts to suppress. Second, individuals tend to overvalue the danger of low-probability risks, and finally, dreadful threats such as terrorism trigger much stronger

---

308 See Humanitarian Law Project, 130 S. Ct. at 2710-11.
310 Id. at 87-100
responses compared to low-probability risks in other contexts.\textsuperscript{311} The examples discussed in Part I demonstrate that criminal prosecutions often draw on the public’s strong emotional response to what it perceives as dire dangers especially in the areas of terrorism and speech endangering minors including sexual expression and cyberbullying.

Several commentators have considered incorporating probability assessments into strict scrutiny review.\textsuperscript{312} One commentator suggests that probabilities may be examined when asking whether the restriction is narrowly tailored, especially if asking whether it is overinclusive.\textsuperscript{313} Alternatively, other commentators suggest that probability assessments may be considered as part of the inquiry whether the state interest is sufficiently compelling.\textsuperscript{314} Under both accounts, to satisfy the strict scrutiny review, the government would be required to establish a much stronger causal link between the speech in question and the future harm before it can criminalize speech.\textsuperscript{315} Drawing upon these ideas, I propose that probability assessments would be incorporated into a strict scrutiny review of all speech crimes. As of yet, the Court has not adopted a probability threshold as part of its strict scrutiny analysis.

Having established the significance of probability assessments, the next question is what level of probability should be required. Alternative probability tests range from the highest level of probability, requiring near certainty or very high likelihood, to a less demanding test requiring substantial probability, culminating in the far more lax “reasonable consequences” standard.

*Brandenburg*’s “high likelihood” test has proved an extremely onerous, if not impossible, threshold to satisfy.\textsuperscript{316} This test fails to take into consideration the distinct dangers that terrorism-related speech poses.\textsuperscript{317} It also fails to account for the enormous proliferation of cyberspace communication. Extending the *Brandenburg* test to additional

\textsuperscript{311} See Masur, supra note 300 at 1298.
\textsuperscript{313} Id. Fallon, at 1330.
\textsuperscript{314} See Siegel, supra note 312 at 220.
\textsuperscript{315} Cf. Erik Luna, *The Bin Laden Exception*, 106 Nw. U. L. Rev. 1489, 1493-97 (discussing risk assessments in the terrorism context and considering the likelihood and consequences of given threats).
contexts is therefore unwarranted. To curb significant risks of future harm, falling short of satisfying the “high likelihood” requirement, the *Brandenburg* test’s stringent elements should be relaxed by adopting an alternative probability test.

A much less demanding standard, however, such as one grounded in “reasonable consequences,” should also be rejected. When speech only reasonably increases the chances of some future harm, criminal sanctions are unjustified for the following reasons. First, this lax standard is inconsistent with the Court’s current application of probability thresholds in the incitement context under which criminal restrictions on speech may be upheld only when harms reach a substantial level of probability. Second, a “reasonable consequences” requirement is in tension with the special status that speech enjoys under the First Amendment. The premise underlying contemporary free speech jurisprudence is that American society is willing to tolerate low-probability risks by setting a high threshold for restricting potentially injurious speech. The lenient “reasonable consequences” test falls short of satisfying this standard.

Lastly, considering other areas of law where personal freedoms may be abridged based on some probability assessments further demonstrates that reasonable suspicion or mere chance of harm are typically insufficient to justify the encroachment on individual freedoms. The Fourth Amendment context is illustrative. It provides individuals with the right to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, requiring that warrants to search and seizure shall be issued only upon *probable* cause. While the Court has never explicitly defined the term, it has held that “probable cause” means a “substantial chance” or “fair probability,” and that it is more than reasonable suspicion but less than a “more likely than not” standard.

The substantial probability standard offers a middle ground between the rigid high likelihood test and the lax reasonable probability” one. Under the proposed test, the state would not be able to satisfy the strict scrutiny’s compelling interest prong if it is unable to demonstrate that there is substantial probability that the speech in question would result in grave harm. The test thus ensures that individuals would not be punished for speech falling short of substantial likelihood of serious harm. But is also ensures that while a real
and significant prospect of harm is necessary, this requirement falls short of high likelihood, which under *Brandenburg* has evolved into near certainty.

One critical component of the substantial probability test is assessing the specific context against which the speech is expressed. Probability tests typically rely on the content of speech to judge its potential for harm.\(^{321}\) The underlying context under which the speech is disseminated, however, should play a crucial role in evaluating the likelihood of harm. Relevant factors that a probability assessment must account for include the identity of speakers, their role among the community and their influence over listeners among the general public or specific individuals.\(^{322}\) Some speakers, mainly political and religious leaders, may have significant influence over their ideological supporters. Speech expressed by a Jewish rabbi, a Muslim imam or a Christian minister has a potentially much greater effect compared to that of a layperson. The form and degree of the speaker’s influence among listeners thus help factfinders determine the dangerousness of a given speech.

b. The Magnitude of the Harm

The nature and severity of the harm that the speech may cause should also be considered when assessing the constitutionality of endangerment speech crimes. Generally speaking, criminal law’s purpose is to prevent conduct that unjustifiably and inexcusably inflicts or threatens *grave harm* on others.\(^{323}\) Endangerment speech crimes, however, often enable criminalization based merely on inflicting trivial or minimal harm or even no harm at all because their definitions do not require that the prohibited behavior result in grave harm.\(^{324}\) The dated offense of public drunkenness is illustrative of the implications of the absence of this element.\(^{325}\) This offense has been traditionally defined as “the appearance of a person who is under the influence of drugs or alcohol in a place

\(^{321}\) *See* Brandenburg, 395 U.S. at 447.

\(^{323}\) *Cf.* Model Penal Code, Section 250.7, cmt 44.

\(^{324}\) *See supra*, Part I.

open to the general public”. The justification for the offense was based on the risk stemming from the perpetrator’s rowdy behavior, consisting mainly of various forms of speech and expression. The Georgia statute, for example, targets speech that is “boisterousness, by indecent condition or act, or by vulgar, profane, loud or unbecoming language.” Other jurisdictions, however, criminalize appearance only to the degree that it may endanger the perpetrator or other persons or property or annoy persons in the defendant’s vicinity. Importantly, these prohibitions extend above and beyond behaviors that endanger actual harm to others to cover behaviors that merely offend or annoy others. Criminalization of public drunkenness is therefore based on conduct merely giving offense to others, falling short of risking grave harm. The criminalization of public drunkenness, despite only risking either trivial/minimal harm or mere offensiveness, provides yet another illustration of the overlooked problem of overcriminalizing speech.

The Court’s existing jurisprudence further enables criminalization of speech without proof of grave harm. For example, the Brandenburg test rejects a sliding scale approach, requiring high likelihood that the speech would lead to any law violation, regardless of the magnitude of its harm. The Court adheres to a “probability thresholds” approach, under which the magnitude of harm is not taken under consideration. When low-probability, high-magnitude dangers speech is concerned, the Court does not engage in a cost-benefit analysis, which balances between competing interests, including the gravity of the harm.

In contrast with the Court’s approach, commentators note that an alternative position that predominates both within the academy and among the lower courts is a cost-

---

333 See Masur supra note 300 at 1309.
benefit analysis.\textsuperscript{334} This approach requires courts to balance the cost of dangerous speech – the harm that the expression is likely to cause if it is allowed – against the benefits one might expect the speech to produce. Speech warrants First Amendment protection only if its benefits outweigh its costs.\textsuperscript{335} Proponents of using cost-benefit analysis to decide free speech cases concede that the magnitude of the harm is a key factor in such analysis.\textsuperscript{336} For example, under a cost-benefit analysis the devastating harms of terrorism are a substantial cost that often outweighs the benefits of terrorism-related speech. Since the magnitude of harm inflicted by terrorism is so enormous, this factor heavily tips the scale towards precluding free speech protection, provided that the evidence demonstrates substantial likelihood of such harm.

Here, I advocate the application of a cost-benefit analysis to measure the constitutionality of all endangerment speech crimes. This approach would balance between competing interests by taking into consideration, among others, the magnitude of the harm. Under the proposal, the state would satisfy the “compelling interest” requirement only if it proves that the speech it wants to ban risks not just any harm but grave harm. A cost-benefit analysis would require the judge to determine the approximate probability that a potential speech-borne threat will materialize, estimate the magnitude of the damage that threat might cause, multiply the probability and magnitude to arrive at the expected outcome of permitting the speech to occur and then compare this outcome with the benefit that the judge expects the speech to confer.\textsuperscript{337} Importantly, incorporating the magnitude of the harm requirement into a cost-benefit analysis cuts both ways. On one hand, it ensures that the risk of merely minimal or trivial harm is insufficient to justify criminalization of endangerment speech crimes. On the other hand, however, it also ensures that the greater the potential harm that may flow from the speech is, the more compelling interest the government has to criminalize that speech.

\textsuperscript{334} Id. at 1296.
\textsuperscript{335} Id.
\textsuperscript{336} See RICHARD A. POSNER, LAW, PRAGMATISM AND DEMOCRACY 360-61 (2003)
\textsuperscript{337} See Masur, supra note 300 at 1296 (explaining the components of the cost-benefit formula).
c. Least Restrictive Means

Another factor for evaluating the constitutionality of endangerment speech crimes is whether a criminal sanction, as opposed to less drastic forms of regulation, is the least restrictive means to satisfy the government’s compelling interest to ban a given speech. Commentators have long noted that criminal law is the strongest formal condemnation society can impose on individuals. It is a stringent weapon, capable of inflicting the harshest and most intrusive sanctions, subjecting defendants to numerous collateral consequences. Criminal law should therefore be used selectively and discriminately and only as a last resort when alternative and less restrictive sanctions fail.

Modern legislation often attempts to appear “tough on crime” and provide “quick fixes” to what the public perceives to be pressing problems by adopting harsh criminal sanctions. This often results in hasty legislative responses, substituting excessive use of the blunt criminal law for more moderate regulation. The upshot is that criminalization often serves as a first, rather than a last resort, in curbing harmful conduct.

The above legislative trend further contributes to the proliferation of endangerment speech crimes. Criminalizing cyberbullying is a case in point, as broadly worded prohibitions raise serious doubts as to whether these offer the least restrictive means to address its harms. Arguably, less intrusive measures, mainly civil and administrative remedies, including common law tort actions such as intentional infliction of emotional distress, invasion of privacy and defamation, as well as injunctions, may suffice and be more effective in curbing the injuries of cyberbullying. While a civil ban on cyberbullying may pass strict scrutiny review by satisfying the least restrictive means requirement, a criminal ban may fail to do so because civil measures offer less restrictive means to curtail this harmful speech.

338 See Dubber, supra note 265 at 546.
341 See Stuntz, supra note 10 at 529-31.
342 See Nils Jareborg, Criminalization as Last Resort (Ultima Ratio), 2 Ohio St. J. L. 521, 523 (2005).
344 Cf. Near 283 U.S. at 631 (implying that the Constitution enables the distinction between permissible criminal and civil laws against libel on one hand and impermissible prior restraint of a publication).
2. Internal Constraints on Criminalizing Speech

As previously suggested, strict scrutiny review alone is insufficient to draw the legal boundary between speech that warrants criminal sanction and one that does not. The following factors, which stem from criminal law theory, provide additional limits on the scope of endangerment crimes.

a. The Perpetrator’s Dangerousness

Establishing the defendant’s dangerousness is a key factor in limiting the scope of endangerment speech crimes. Speech becomes more dangerous as the gravity of the potential harm increases. When the harm threatened is not sufficiently serious, the speech is not dangerous enough to justify criminalization. Moreover, a defendant’s dangerousness may be defined in terms of the likelihood that her conduct will inflict harm. Speech becomes more dangerous when there is substantial probability that it would result in harmful conduct. The dangerousness requirement is thus closely linked to the above constitutional constraints. But the essential role that dangerousness assessments play in the criminal justice system calls for a separate discussion of this requirement.

Dangerous determinations cut across the criminal justice system, prominently featuring in various stages of the criminal process. Examples of situations in which the government engages in dangerousness assessments include investigative stops by the police, pretrial detention, non-capital sentencing and death penalty determinations. Dangerousness evaluations, however, also play a more tacit role in the realm of substantive criminal law, mainly with respect to inchoate crimes. The function of conspiracy law’s overt act requirement and attempt law’s substantial step requirement is to demonstrate the defendant’s dangerousness. The premise underlying these requirements is that a perpetrator becomes dangerous only by transforming plans and thoughts into real action.

345 See supra section A.
347 See Slobogin, supra note 33 at 1.
348 Id. at 2.
Demonstrating the perpetrator’s dangerousness becomes more challenging in cases where criminalization is grounded on speech alone, unaccompanied by tangible action. As previously noted, legislatures often criminalize risk-creating speech without requiring evidence of the perpetrator’s dangerousness. Prosecutors in turn bring charges for mere speech, absent of proof of the defendant’s dangerousness. These trends thus result in diluting the significance of the dangerousness element. By insisting that criminalization of speech is contingent on clear proof of the perpetrator’s dangerousness, the proposal advocated here reinvigorates the role that the dangerousness requirement must play in all endangerment speech crimes.

b. Distinguishing Criminal Wrongdoing From Civil Harm

Another constraint on the criminalization of speech calls for a more principled distinction between conduct appropriately targeted through criminal law and one better targeted through civil measures. Current law often proves unsuccessful in drawing a meaningful line between these two types of regulation. This shortcoming may be traced to an ambiguity concerning the notion of criminal harm. In recent years, the harm principle has arguably become the main justification for criminal prohibitions. The term harm itself, however, is so elusive that it escapes a unanimous definition. Over the years, expansive harm definitions have enabled legislatures to use this principle to justify a myriad of criminal prohibitions. While originally the harm principle was perceived as a tool to limit the scope of criminal statutes, it now serves to expand the scope of criminal regulation. The upshot of the overbroad definition of harm is that the criminal justice system conflates criminal and civil harms.

To some theorists, the prevention of harm is a sufficient basis for criminalization. Others, however, insist that in addition to inflicting harm, an act

350 See supra Part I.
351 Gladish, 536 F. 3d at 648 (elaborating on the significance of proving the defendant’s dangerousness).
353 See Brown, supra note 273 at 971.
354 See Harcourt, supra note 352 at 139-40 (explaining how the harm principle justifies criminal statutes).
should also have offended a moral wrong. While the notion of harm cuts across injuries addressed both in civil and in criminal law, it is simply an inadequate measure for evaluating whether criminal regulation is warranted. A distinct tenet of criminal harm is that it stems from a morally wrongful and blameworthy conduct. Civil harm, by contrast, does not hinge on culpable behavior.

Criminalizing endangerment speech is often inconsistent with these fundamental requisites. The case of verbal harassment is again illustrative. As previously suggested, using criminal sanctions to address the harms of cyberbullying is unwarranted in light of the numerous problems they create. Constitutional constraints, however, would not suffice to limit criminalization because the grave harms inflicted by cyberbullying may justify civil remedies that might satisfy the First Amendment’s least restrictive means requirement. Additional constraints must include not only serious harm but also normatively wrongful conduct justifying criminal sanction. The latter requirement may be lacking with respect to adolescents’ cyberbullying where awareness of the elements of the offense is often absent. For these behaviors, civil sanctions may be more appropriate for achieving the goals of harm prevention.

c. Intent to Inflict Harm

A final limit that draws a clearer distinction between criminal and non-criminal harm is proof that the perpetrator intended to inflict harm, or at least demonstrated willful blindness to the risk of causing harm. While intent is already a fundamental element of attempts and conspiracies, it is not a requisite element of all endangerment speech crimes. Take, for example, the offense of disorderly conduct in public places, broadly proscribing various forms of behaviors, many of which are grounded solely in speech, arguably as a means to prevent the disturbance of public order. In Aaron Tobey v. Terry Jones a person was charged with disorderly conduct after he had removed his clothes when requested by Transportation and Security Administration agents to submit to enhanced screening at the airport, in order to expose the text of the Fourth Amendment, which he

---

358 See Feinberg, supra note 330 at 116-18.
359 See supra Part I. B.1.
had written on his bare chest.\(^{361}\) Tobey claimed that he was protesting against the government’s practice of enhanced screening, which he believed to violate his constitutional rights.\(^{362}\) Notably, the offense’s elements may be satisfied not only upon proof that the defendant intended to create a risk of public inconvenience, annoyance or alarm, but also upon proof that he recklessly created such risk.\(^{363}\)

Evaluating the firmness of defendants’ intent is of particular significance in endangerment speech crimes because of the often-ambiguous nature of speech. A defendant may engage in speech that threatens future harm without intending that others engage in conduct that ultimately inflicts the harm. Since individuals may abandon their risky endeavors even at the last moment, criminalization of endangerment speech ought to be limited only to cases where the defendant’s intent has already risen to the level of firm resolution to inflict harm. Merely taking a substantial and unjustifiable risk that the speech would result in harm should not suffice to uphold criminalization.

Moreover, since criminalizing speech may be warranted when speech is aimed at leading others to commit crimes, evidence should be required to prove that the defendant intended to influence the listeners’ conduct, as opposed to their attitudes and beliefs.\(^{364}\) Criminalizing speech is unjustified if the speaker’s expression only aims at affecting others’ ideas. While such speech may contribute to an atmosphere of violence, changing people’s attitudes in itself is insufficient to justify criminalization.\(^{365}\)

**B. A Test Case**

Heinous crimes of mass violence under International criminal law provide a powerful test case for applying the proposed constraints. The purpose of turning to this specific context is twofold: first, to demonstrate that even in the area of genocide, the most horrific type of mass atrocities, endangerment speech does not always justify criminalization. Second, to offer an analogy between the large-scale effects of genocide

\(^{361}\) See Aaron Tobey v. Terry Jones 706 F. 3d 379 C.A. 4 (VA 2013).

\(^{362}\) Id. at 383-84 (the Commonwealth attorney for Henrico county subsequently dropped the charges. Tobey sued the agents and police officers and the Court of Appeals for the Fourth Circuit accepted the argument that his action stated a cognizable First Amendment claim).

\(^{363}\) See VA Code Ann. § 18.2-415 (stating that liability may be based on a mens rea of recklessness).

\(^{365}\) Id. at 177 (rejecting criminalization based on the creation of an atmosphere of violence).
and those of terrorism by suggesting that similar constraints should be applied in both areas.

Genocidal slaughter of the minority Tutsi by the majority Hutu was committed in 1994 in Rwanda, massacring between 500,000 to 800,000 Rwandans.\textsuperscript{366} Several individuals were criminally charged in the International Tribunal for Rwanda for incitement to commit genocide.\textsuperscript{367} Among them was Simon Bikindi, an immensely popular Rwandan pop singer, and an extremist Hutu, who was charged based on two speech-related events. One count stemmed from an incident in which Bikindi rode in a truck with a loudspeaker, in an area where Tutsis have been massacred, urging militant Hutu to kill all surviving Tutsis.\textsuperscript{368} Another count alleged that Bikindi composed, performed, recorded or disseminated musical compositions extolling Hutu solidarity and characterizing Tutsi as enslavers of the Hutu. These compositions were subsequently deployed in a propaganda campaign to target Tutsi as the enemy and to instigate, incite, and encourage the Hutu population to separate themselves from the Tutsi and to kill them.\textsuperscript{369} The songs were disseminated at political rallies, radio broadcasts, and pre-killing meetings and at Bikindi’s public speeches.\textsuperscript{370}

The International tribunal convicted Bikindi for incitement to genocide based only on his ride with the loudspeaker, reasoning that it amounted to direct call to Huto militants to commit genocidal acts against individual Tutsis. Importantly, the tribunal acquitted Bikindi of the songs-based count, holding that there was insufficient evidence to prove that Bikindi composed the songs with specific intent to incite the killings.\textsuperscript{371}

To consider the application of the above proposal on Bikindi’s case, let us first frame the case in the context of American law by assuming that there was jurisdictional authority to prosecute Bikindi. It is reasonable to assume that in most jurisdictions, jurors

\textsuperscript{367} See Benesch, \textit{supra} note 322 at 494.

\textsuperscript{369} \textit{Id.} at 619.

\textsuperscript{370} \textit{Id.} at 617.

\textsuperscript{371} See Benesch, \textit{supra} note 322 at 494 (noting that under treaty law, to commit the crime of incitement to genocide one must have specific intent to cause genocide and the incitement must be direct and public).
would have convicted Bikindi of solicitation of murders or aiding and abetting these crimes based both on the truck ride event and on disseminating the songs.372

Applying the proposed limits on Bikindi’s two speech-based charges would have resulted in conviction with respect to the truck ride event but in acquittal with respect to the inciting songs. As for the former charge, Bikindi would have been rightly convicted for explicitly calling to kill Tutsis because given the content and the context of his direct instruction to militants, there was a substantial probability that his call would result in genocidal acts. The basis for this conclusion rests with incorporating a probability assessment into the speech at issue. The magnitude of the harm—genocidal murders—plays an important role in a cost-benefit analysis of Bikindi’s speech because the costs of such speech clearly outweigh its benefits. Moreover, a direct call to militants to engage in genocidal acts demonstrates Bikindi’s dangerousness and his intent to cause genocide of Tutsis.

In contrast, under the proposal Bikindi would likely not have been convicted for disseminating these songs for the following reasons. First, the government would have likely been unable to prove that there was substantial probability that the artistic expression of national sentiments would ensue in genocidal acts. Admittedly, the songs amounted to hate speech, consisting of abhorrent messages against Tutsi. But even the prosecution characterized them only as “songs extolling Hutu solidarity” rather than direct calls for the killing of Tutsi.373 Second, communicating extremist solidarity messages by an artist would have likely failed to prove Bikindi’s dangerousness. Third, the evidence would have likely failed to establish Bikindi’s intent to cause the genocide. Finally, even the suspect context, allegedly supporting conviction—given the facts that genocide had already occurred and Bikindi enjoyed immense influence among extremists—would have been insufficient to prove that the songs were likely to incite genocide. In sum, the guidelines provide a principled analytical framework for assessing the constitutionality of speech crimes, ensuring consistent outcomes in future cases.

373 See Gordon, supra note 368 at 619.
CONCLUSION

This Article has identified endangerment speech crimes as yet another example of legislatures’ excessive use of the preventive paradigm in the criminal justice system. It has demonstrated the ways in which these crimes have resulted in the overcriminalization of speech, a phenomenon that carries a host of unintended consequences not only from the perspective of the First Amendment but also from the perspective of substantive criminal law.

The Article has argued that existing theories categorically excluding all speech acts from First Amendment scrutiny are responsible for the overcriminalization of speech. Having established that these theories are flawed, the Article has offered an alternative doctrinal scheme that would ameliorate the problem. The proposed analytical framework suggests that all speech crimes would be subject to strict scrutiny judicial review as well as to internal constraints arising from criminal law theory.

While subjecting all speech crimes to these constraints is arguably more protective of speech, the Article nowhere suggests that all endangerment speech crimes are entitled to broader First Amendment protection. Admittedly, the First Amendment must yield when speech threatens grave harm to the nation or to specific individuals. Subjecting endangerment speech crimes to the proposed constraints would not result in granting constitutional protection to speech that warrants criminal sanctions.

Many speech crimes are normatively justified, and would pass constitutional muster because the government would be able to demonstrate, based on a balancing process between competing interests, that the benefits of criminalization outweigh the costs it imposes on the right to speak. The proposal would therefore not frustrate the purposes of criminal law, mainly harm prevention and the deterrence of potentially dangerous conduct. Appropriate risk management, however, must account for the probability that grave harm would be inflicted. Applying strict scrutiny analysis to all endangerment speech crimes ensures that risk-creating speech is criminalized only once substantial likelihood of grave harm is established. Additionally, the use of the criminal law is justified only upon proof of truly dangerous behavior.
